VAX DOCUMENT

VAX DOCUMENT is een commerciële toepassing die op $\text{T}_{\text{E}}\text{X}$ gebaseerd is. Aanvankelijk binnen Digital Equipment Co. ontwikkeld voor intern gebruik voor productie van alle VAX/VMS documentatie en s/w produkten, maar nu ook in gebruikerslicensie voor VAX/VMS gebruikers verkrijgbaar. Vanaf VMS V4 is het resultaat hiervan te zien.

Ervaringen met fotozetters

Sinds enige tijd bestaat de mogelijkheid om bij A.J. Scholten - Transcripta fotozetsel van $\text{T}_{\text{E}}\text{X}$ /dvi-files te laten maken. Het grote voordeel van Transcripta is dat er uitsluitend met $\text{T}_{\text{E}}\text{X}$ gewerkt wordt en derhalve zeer veel deskundigheid bij het bedrijf in huis is. Men beschikt over een Linotronic 100, die een resolutie levert van 1270 dpi.

Announcement T_EX90 Conference

The 1990 T_EX meeting in Europe is the fifth such conference organised since 1985. It also breaks new ground as the first to be a T_EX Users Group (TUG) meeting outside North America. The T_EX computer typesetting program is now widely established as the de facto standard in scientific, educational and commercial use for the setting of documents requiring very high standards of typographic control, particularly technical documents, and for applications where high quality, portability and device-independence are of importance.

The Development of National L^AT_EX styles

In its autumn 1988 meeting, the Dutch T_EX users group (NTG) established a working group (number 13) that was to concentrate on the problems involved in the use of T_EX for Dutch texts. Since then the working group, which includes the authors, has created a number of style options for L^AT_EX that remedy some common problems with the non-English use of L^AT_EX, and is on its way developing document styles that are compatible with the standard styles, but have a layout that is more palatable for Dutch users. In this article we treat implementation aspects of the styles and style options, and we discuss some matters of layout.

Unusual paragraph shapes

Although the T_EXbook states that T_EX’s paragraph mechanism ‘can be harnessed to a surprising variety of tasks’, the strangest paragraph shapes that I have implement use no feature of the line-breaking algorithm. Instead, I have found that the control sequences `\everypar` and `\lastbox` are extremely powerful tools. I give three examples of this.

Teaching T_EX: Critics & L^AT_EX proposal

Some critics - mainly L^AT_EX based - on the approach are given: T_EXnically driven instead of result driven. Also is notified the omission of a general pedagogical method to be used. Furthermore, it is urged to have unified courseware. A set of L^AT_EX courses is proposed. No test set is included. The underlying idea of having TUG certified courses world-wide is strongly endorsed.

Wat is T_EX?

In de huidige tijd van WYSIWYG 'desktop publishing' systemen lijkt het vreemd een systeem te propageren met honderden, vaak ingewikkelde, instructies. Wat het tekstopmaak-systeem T_EX desondanks aantrekkelijk maakt, is het feit dat het programmeerbaar is: de basisinstructies kunnen worden samengevoegd tot zeer gecompliceerde instructies die een eenmaal ontworpen opmaak geheel automatisch feilloos reproduceren. Hierdoor hoeft de gebruiker uitsluitend nog de structuur van het document aan te geven en niet de vormgeving, het uiterlijk, ervan. Met deze gedachte sluit T_EX nauw aan bij recente ontwikkelingen in de uitgeverwereld omtrent SGML.

T_EX stuff at cs.ruu.nl

Here is a brief description of our archive of T_EX stuff. The archive is available by FTP and by mail server. It contains various things, a.o. Atari ST software, GNU software, some Unix software and a lot of T_EX things. I will concentrate on the T_EX stuff in this message.

SGML- \TeX conference, Groningen

For their second full-day international meeting, the Nederlandstalige \TeX Gebruikersgroep (NTG) organised, in conjunction with the Dutch SGML Users Group, a conference intended to focus interest on the use of \TeX and SGMLtogether. On August 31st, approximately 100 delegates from both 'camps' attended the day's events in Groningen, with what seemed a good balance between SGML-ers and \TeX ies.

Towards L^AT_EX 3.0

L^AT_EX is a very valuable tool for document composition. As a T_EX macro package, it is unique in its concept of logical commands, at the same time retaining enough flexibility with visually oriented commands to allow the user a relatively easy correction of an automatically chosen layout. This fact makes it far superior to the plain and AMS-T_EX macro packages when it comes to professional applications. Therefore the L^AT_EX re-implementation project is certainly one of the most important efforts to 'expand T_EX's horizon'. This is the place to link T_EX with the modern developments like SGML. This paper describes the current status of the re-implementation of L^AT_EX.

Getting T_EXnical: Insight into T_EX Macro Writing Techniques

Most of us understand the basic form of T_EX macros but that understanding alone is often inadequate when we need to solve certain problems. We need additional insight to be able to develop methods of passing information, moving text with changed catcodes, preserving blank lines, and more. Writing a large macro package brings in a new set of issues: how to avoid bumping into implementation restrictions, e.g., constraints of hash size, string size, and others; how to make a pleasant user interface; how to make your code as concise as possible. Some of the techniques to be discussed here include making a macro with a variable number of arguments; changing catcodes in macros, defining a macro whose argument is intentionally never used; conserving hash size by using counters instead of newifs; csname techniques and non-outer dynamic allocation; and table making techniques. Finally, some suggestions are included on methods to use when developing new macros.

The Dutch national L^AT_EX effort

In this article an overview is given of the activities of working group 13 (WG 13) of the 'Nederlandstalige T_EX Gebruikersgroep' (Dutch T_EX Users Group). This working group is also called 'Neerlandica', and is interested in anything that has something to do with using L^AT_EX (and T_EX) in a non-American environment. The topics tackled so far range from the design of a page layout suitable for A4 paper by adapting the American layout of article.sty to Dutch typographical tastes, to the implementation of a new letter style called 'brief'.

TUGboat production: T_EX, L^AT_EX, and paste-up

TUGboat has now completed more than ten years of publication. Starting with T_EX78 and an electrostatic printer and progressing through increasingly versatile software and hardware, the authors have kept us challenged, both with the content that the reader sees and the little tricks that happen ‘under the covers’. This talk will be a survey of some of the milestones of TUGboat production, our editorial philosophy, what we’ve learned about what T_EX can and cannot do, and some advice to authors and production editors of other publications.

Development of DANTE e.V.

geen samenvatting (no abstract)

Joachim ...

MAPS 5 1990

p 91-92  20 kB

Verslag GUTenberg '90

Waarnemingen/beslissingen:

- Zusterclubs zijn automatisch lid van elkaar;
- DANTE en GUTenberg 100% gegroeid;
- TUGlib wordt uitgebreid met T_EX bibliografie;

Producten/macros:

- Zetten commutator diagrammen via L^AT_EX;
- Ook muziek zetten nu via T_EX;
- Zetten van (ADA, ...) programma's;
- Zetten van bridge literatuur;
- Voor multilingual T_EX3.0 is MLT_EX nog nodig;
- T_EX in kleur?

Board-of-Directors and Euro-Summit at Cork90

TUG organizational:

- TUG is really open now;
- Working Groups will be sent off with better task

descriptions and reporting time schedules;

- How to fulfil better membership needs is proposed;
- A scholarly TUGboat and a separate newsletter is proposed;

Topical TUGboat issues are under consideration;

- No increased membership/postage fees for those outside USA;
- The dangling reciprocal membership question is near to a pilot study;
- BoD can operate faster because of adoption of voting by e-mail;
- An extended membership directory is asked for;
- A resource directory is asked for;
- Maintenance/evolution of $\text{T}_{\text{E}}\text{X}$ etc. software must be handled by TUG and LUGs; DEK and LL are out of it!
- More attention will be paid to PR activities: Welcome c.q. Information/Demo packets will be prepared;

Euro-Summit:

- Eastern and Western European countries will exchange information;
- A status report, Euro-Summit Cork90 (?), will appear with contact addresses and status reports.

Report European T_EX conference Cork90

The following was on at this joint TUG90 and EuroT_EX90 meeting at Cork. Hypertext and T_EX. Cork encoding scheme for 8 bit fonts. Halftone output from T_EX. Macro writing in T_EX, especially Getting T_EXnical. The Dutch T_EX efforts were reported. The issue of a T_EX archive was raised again. Text around figures in L^AT_EX. Document design and style development. Proposals for L^AT_EX3.0. SGML and T_EX for tables and Math. Graphics and T_EX, such as P_IC_T_EX use, tif format and pk files. Old german fonts. BiB_T_EX requirements. Discussion of T_EX books. The question of T_EX at schools was raised.

An indentation scheme

Indentation is one of the simpler things in $\text{T}_{\text{E}}\text{X}$: if you leave one input line open you get a new paragraph, and it is indented unless you say `\noindent`. And if you get tired of writing `\noindent` all of the time, you declare `\parindent=0pt` at the start of your document. Easy. More sophisticated approaches to indentation are possible, however. In this article I will sketch a quite general approach that can easily be incorporated in existing macro packages. For a better appreciation of what goes on, I will start with a tutorial section on what happens when $\text{T}_{\text{E}}\text{X}$ starts a paragraph.

A parskip scheme

In this article I will present an approach that unifies the paragraph skip and the white spaces surrounding various environments. Since the macros given below make use of the `\everypar` token list, this article may be seen as a sequel to an earlier paper on an indentation scheme, which is based on a similar principle. The `\everypar` parameter was explained there.

SGML (,T_EX and ...)

What SGML (and T_EX) is all about is given in a nutshell. Markup of example document elements, by SGML and L^AT_EX, are provided. Coupling SGML to T_EX is considered by direct translation and by the intermediate procedural markup phase. Interfacing SGML to (L^A)T_EX is also addressed. Some guidelines are provided in order to decide when SGML, or T_EX (alone, both, or neither) might be beneficial. It is a 3-in-1 paper: what is SGML and T_EX all about, examples of marked up copy in SGML and (L^A)T_EX and the coupling issues, finished up with a literature compilation.

SGML en T_EX in scientific publishing

Elsevier Science Publishers has for a few years investigated the possibility of accepting compuscripts, a manuscript in electronic form, created with T_EX, L^AT_EX and a few other text processing systems, and converting these to SGMLform. This paper will discuss the current status of these activities, the reasons for converting compuscripts to SGMLform, and the various ways in which T_EX is used.

Math into BLUes

T_EXing mathscripts is not simply typing. Math has to be translated into T_EX commands. First the motivation for this work is given. Next traditional math page make-up is summarized along with the macroscopic math T_EX commands. After answering ‘Why T_EXing mathscripts is difficult?’ an anthology of T_EX falls and their antidotes is discussed. At the end suggestions are given in order to lessen the difficulties.

Babel, a multilingual style-option system for use with \LaTeX 's document styles

The standard distribution of \LaTeX contains a number of document styles that are meant to be used, but also serve as examples for other users to create their own document styles. These styles have become very popular among \LaTeX . But it should be kept in mind that they were designed for American tastes and contain a number of hard-wired texts. This article describes a set of document-style options that can be used in combination with the standard styles, which makes the latter adaptable to other languages.

The structure of the T_EX processor

In this article I will describe the T_EX processor as a multi-layered engine that successively transforms characters into tokens, tokens into lists, and from these lists builds a typeset page.

NTG's continuation: The Third Year

An NTG year of activity parallels the Dutch academic year: September to September. The membership increased by roughly 40% to circa 140 members of which 25 or so are institutional members. Due to the intermediate T_EX course some financial reserve has been built up. NTG's third year can be characterized by 'continuation,' and the embarkation upon a multi-year project.

Enige Suggesties aan de Redactie van de MAPS

De functie van de MAPS wordt belicht en gerelateerd aan hoe dat te verwezenlijken. Punten aangestipt zijn: onjuiste afbrekingen, slecht-ogende automatische uitvullingen, en typos. Voorgestelde oplossing geen referee-mechanisme maar duidelijk aan de auteurs geven van wat van ze verwacht wordt plus overgaan op de nieuwere tools. Structureel is het te late verschijnen voorkomen vanwege het notulen-aspect: geen notulen geen vergadering.

Go diagrams with T_EX

Encouraged by Zalman Rubinstein, who described his chess diagrams in TUGboat vol. 10 no. 2, I have prepared some special fonts and T_EX macros to be used in typesetting go diagrams.

Towers of Hanoi, revisited

Another version of T_EXing of 'The Towers of Hanoi' problem is provided, which does not assume Lisp knowledge, just plain T_EX. Also some variations of use are included, among others to remove the restriction on the disks: disk size can be supplied by more than one digit.

6th European T_EX Conference

- User groups:

CyrTUG is bound to become important. CSTUG prospers. HunTUG is modest. The Poles can't get organized. Yunus is only a list. The other five just go on.

- Panels:

T_EX in Europe, how can we obtain better acceptance? L^AT_EX3: impressive history, no release dates of yet.

- Presentations:

Zlatuška's ACCENTS processor, for automatic generation of accented virtual fonts for European languages from English input fonts in the T_EX font layout, looks promising.

- Publishing houses:

MIR is involved. Springer is active and has some user guides out for a pilot journal. The Czech scientific journals are all formatted by T_EX!

- Products:

LAMST_EX is still going public. Very promising though, especially the wizards manual.

The TUG91 Annual Meeting

- Education:

David Salomon is a great teacher: insights! He has donated his notes to TUG for inclusion in the T_EXniques series.

- Publishing houses:

The publishing houses accept (La)T_EX copy. AMS leads with their total production formatted via T_EX: 90K pages per year.

- Interchange format:

DVI and Encapsulated PostScript!

- Workshops:

Modifying manmac was great! The ways of encapsulating PostScript are put together by Anita Hoover. (see elsewhere in MAPS)

- Products:

LAMST_EX goes public. ArborT_EXt has extended and improved their products. ETP, of Mimi Lafrenz, did steal the show.

Hoe met L^AT_EX een boek kan worden gemaakt

Het creëren van een boek met L^AT_EX is geen vanzelfsprekende bezigheid. Onderstaand het relaas van zo'n poging: het boek-in-wording *Inleiding Informatica* dat in eerste instantie als dictaat bij het bijbehorende college is geschreven en nu in een boekversie is aangeboden aan Addison-Wesley. In onderstaand betoog wordt voorbij gegaan aan het belangrijkste onderdeel van het schrijven van een boek: het schrijven van de tekst. We zullen het hier slechts hebben over de problemen en oplossingen voor wat betreft de layout.

Ladies and \LaTeX

This paper describes the use of \LaTeX by non-astronomers at the Kapteyn Institute. Although the general opinion is that it is too complicated for non-scientist, experience in Groningen proves otherwise. If you provide good tools or styles everybody is capable of using \LaTeX . Also, the astronomers took over tricks from the ladies, simplifying their lives, too.

The TUGLIB Server

Scores of sites on the worldwide Internet now provide access to assorted collections of software relating to T_EX and METAFONT. In many cases, these are accessible only via the Internet mechanism known as anonymous ftp, a scheme that permits logins from unknown users, usually on other machines, with very restricted access. The name ftp is an acronym for file transfer protocol. To improve the access to the T_EX archives and other software at Utah, I have installed 'tuglib'. This server provides a means whereby remote users can send electronic mail messages containing service requests to a daemon program. The daemon parses the requests, logs them, and responds to them.

Jaarverslag NTG 1991

In 1991 ging de NTG zijn 4e jaar van bestaan in. Wederom verschenen er een tweetal MAPS (Minutes & Appendices), twee NTG bijeenkomsten vonden plaats met een groeiend aantal lezingen, bestuursverkiezingen werden voor het eerst gehouden, een gecombineerd NTG/TUG lidmaatschap werd mogelijk, de samenwerking met Wiskundig Nederland kreeg gestalte, en er werd verdere aandacht besteed aan de continuering en acceptatie van de NTG.

Music \TeX ; using \TeX to write polyphonic or instrumental music

Music \TeX is a set of \TeX macros to typeset polyphonic, orchestral or polyphonic music.

Dating with T_EX

Three T_EX-coded algorithms are given for performing tricks with dates.

Dag van het Document (verslag ITI-TNO informatiedag)

Een verslag van de dag van het document. Centraal stond de problematiek: opslag en retrieval van documenten. Interessant waren het begrip bibliotheek zonder muren, en de intelligente auteursomgevingen. Het dilemma ten aanzien van het centrale theem is: moeten wij alles bewaren of selecteren en vergeten? Ook het forum kwam hier niet uit. Er was een beurs met een 20-tal stands.

Molecuul Muis Manuscript (verslag KNCV symposium)

Op 18 oktober 1991 werd door de sectie Computertoepassingen van de KNCV (Koninklijke Nederlandse Chemische Vereniging) een symposium m.b.t. chemische tekstverwerking georganiseerd. Naast een algemene introductie over 'Electronisch Publiceren', kregen zowel de Apple Macintosh als MS-DOS geïnteresseerden (chemici) de huidige mogelijkheden van het verwerken van chemische teksten voorgeschoteld. Het pakket T_EX kwam in een laatste lezing naar voren. De duidelijk geslaagde dag werd bezocht door een kleine honderd deelnemers, inclusief een tiental leveranciers. Vele (leerzame) demonstraties, zowel tijdens de lezingen, als ook tussen de lezingensessies door, zorgden mede voor een duidelijk overzicht.

LaTeX Editing support

The structured markup of LaTeX can be easy to read and understand, but tedious to type. Its syntax of environment groups bears a strong resemblance to the begin/end groups of the Algol family of computer programming languages, which can be described by rigorous grammars that in turn permit the automatic construction of lexical analyzers and parsers, and structured editors to support programming in those languages. This article describes a powerful facility for the preparation of LaTeX documents using the Emacs text editor.

Prolegomena toward a font selection scheme

Most users of plain \TeX do not get very sophisticated in their use of fonts. Often they resort to declaring all used fonts explicitly with `\font`. There are some obvious disadvantages to that: it is not possible to switch a whole document in a simple way to a different typeface, or to a different size. As a result, I've seen such phenomena as an article with an abstract in 8 or 9 point, but where the formulas were still in 10 point, or pages of 'magnified' type where the lines were cramped, because the `\baselineskip` was not increased with the type size. The need for a good font selection scheme is thus quite obvious, but the implementation of one is not.

From observation to publication

This article describes the use of $\text{T}_{\text{E}}\text{X}$ in publishing observations of variable stars observed by Dutch amateur-astronomers. The observations are published in the journal 'Variabilia' and in the so-called Reports. In the latter the observations, collected in several years, are published and submitted to the professional astronomer. It includes tables and light-curves: plot of the changing magnitude of the star versus time. In creating the light-curves: $\text{P}_{\text{I}}\text{C}_{\text{T}}\text{E}_{\text{X}}$ is used. In preparing the files for $\text{P}_{\text{I}}\text{C}_{\text{T}}\text{E}_{\text{X}}$ simple $\text{T}_{\text{E}}\text{X}$ -coding is used for manipulating the data.

WG 4: Fonts; Hoe maak ik van een font twee fonts?

Andrea de Leeuw van Weenen wilde een deel van haar zelfgemaakte font aan kunnen spreken met de gewone letters op het toetsenbord, en niet met lastig in te typen en (evt.) lastig te onthouden macros. De aangewezen manier leek het maken van een virtueel font. Dus heb ik eens op een rijtje gezet wat je daarvoor nodig hebt.

The Key to Successful Support: Knowing Your T_EX and L^AT_EX Users

The primary emphasis of this paper is to address the issues related to supporting T_EX and L^AT_EX. One essential ingredient to successfully supporting any package is that you must know your users. In the case of T_EX and L^AT_EX, this is especially true, because the user base can be so diverse. This paper will focus on support strategies that address different types of users and what you can do as a T_EX and L^AT_EX support person to adopt these strategies in your organization.

The Pursuit of Quality

This paper compares high-quality craft typography with the state of the art in automated typesetting. The first part discusses several typographical conventions which cannot be implemented by means of any formatting model currently in use. The second part explains why the current paradigms of computerized typesetting will not serve for high-quality formatting and suggests directions for the further research necessary to improve the quality of computer generated layout.

Writing Reports with More than a Hundred People

This paper describes a system that produces project status reports using L^AT_EX. The reports contain both textual and financial information. The textual part of the status reports is written by over a hundred people who don't need to know what L^AT_EX is. The financial information is retrieved from a database.

\TeX -based Production at the AMS

The American Mathematical Society (AMS) is a both major publisher of mathematical research, and a professional organization whose members are mathematicians engaging in research at academic institutions and other research centers in the U.S. and around the world. A primary function of the Society is to provide channels of communication whereby these mathematicians can communicate the results of their research to each other, and to the broader scientific community. Foremost among these channels of communication is an extensive publications program which is based on the \TeX typesetting system.

Standard dtd's and Scientific Publishing

This paper has two parts. In the first part we argue that scientific publishing needs one standard dtd for each class of documents that is published, for example one for all research papers and one for all books. In the second part we apply this reasoning to mathematical formulas, and we outline some design requirements for a document type definition for mathematical formulas. In the appendices we discuss and compare existing document type definitions for mathematical formulas.

[p 111-114](#)  [50 kB](#)

Table Diversions

Characteristics of existing table macro collections are given. A kaleidoscope of tables – as next best to a taxonomy – is presented. Newly introduced is the class of bordered tables. Variations in print-ruled, nonruled, framed, nonframed, dotted, centered, flushed-can be obtained via the invoke of parameter setting macros; no modification of user mark up. Simultaneous row and column spans, partial rules, and dotted lines are dealt with. The listing of the macro `\btable`, with auxiliaries, is included.

Syntactic Sugar

A plea is made for being honest with $\text{T}_\text{E}\text{X}$ and not imposing alien structures upon it, otherwise than via compatible extensions, or via (non- $\text{T}_\text{E}\text{X}$) user interfaces to suit the publisher, the author, or the typist. This will facilitate the process to get (complex) publications out effectively, and typographically of high-quality.

Bugs (sigh) in Knuths ‘Computers & Typesetting’

In may/june this year a discussion started on the T_EX-NL listserver (by Kees van der Laan and Nico Poppelier) about the releases of Knuths book series: it was not sure that Addison-Wesley was selling only the latest book editions. We have forwarded that discussion directly to Addison-Wesley in Amsterdam. The answer is included in next section.

L^AT_EX3; Call for Volunteers

This is a call for volunteers to help in the development of L^AT_EX3. There are many tasks needing to be done in support of the L^AT_EX3 project which can be worked on concurrently with the development of the L^AT_EX3 kernel. Furthermore, some tasks require special expertise not found among the core programming team. Initial research, analysis, and work on these tasks by volunteers can greatly speed up the process of integrating a number of desirable features into L^AT_EX3. Many of these features can be extensively developed and tested under L^AT_EX 2.09 even before the L^AT_EX3 kernel is available.

EuroT_EX'92 proceedings

EuroT_EX '92 proceedings volume contains 330 pages of papers presented at the last European T_EX Conference held in Prague, Czechoslovakia. There are full texts of five invited talks included, presenting topics ranging from the future of T_EX to combinations involving METAFONT and PostScript, and also user support. The volume is available from the Czechoslovak T_EX user's group for only DM 30.-.

Jaarverslag NTG 1992

In 1992 ging de NTG zijn 5e jaar van bestaan in. Twee NTG bijeenkomsten vonden plaats met vele goede lezingen, naast een succesvolle en goed bezette 5-daagse Advanced T_EX cursus (low budget; met het cursusmateriaal als MAPS-Special). Er verschenen wederom een tweetal MAPS uitgaven (Minutes & Appendices). Medewerking werd tevens verleend aan het L^AT_EX3 project.

En voor de rest is er het diverse door de leden gedaan waaronder een Public Domain MS-DOS set (instap en volledige versie), proeflezen van de MAPS, en de hulpverlening bij vragen op de T_EX-NL discussielijst.

NTG's Bulletin Board FGBBS

Nieuw voor de Nederlandstalige T_EX Gebruikersgroep: een T_EX Bulletin Board speciaal voor diegenen die niet op het Internet zijn aangesloten. De naam: FGBBS. Op FGBBS is sinds kort een zo volledig en actueel mogelijke T_EX, emT_EX, L^AT_EX en MusicT_EX collectie beschikbaar voor alle bezitters van een modem. Het BBS is kosteloos toegankelijk voor iedereen en er zijn geen beperkingen aan de hoeveelheid bestanden die kunnen worden opgevraagd. Het systeem is aangesloten op een High Speed modem, vergeleken met de transmissiesnelheid die een directe Internet link biedt misschien niet geweldig, maar veel beter kan het niet over de gewone huis- tuin- en keukenPTTlijn. FGBBS is te bellen op 085-217041. Noot 31-jan-1997: nieuw nummer is 026-3217 041.

A way to ensure the future of T_EX: make its use easier on low-cost machines

The PC is the cheapest computer and the most widespread one in the scientific community. Faced with commercial scientific word-processors that are improving steadily in wrong directions, it is urgent to make the use of T_EX easier on the PC, to ensure its future and avoid costly dead-ends to researchers. We have designed a program, AsT_EX, that allows to create easily multi-author scientific documents in T_EX or L^AT_EX on PCs. It provides an on-line hypertext help and a multi-level assistance in typing L^AT_EX code. It allows to display and modify very easily the structure of a document, to archive and retrieve files related to it, to perform numerical and formal computations from the document and include automatically the results, to create L^AT_EX tables from worksheets or databases of formulas. It processes electronic mail and files sent by list servers for a better use of information and eases considerably the use of anonymous ftp and archie servers by local archiving of selected informations.

4 \TeX : a \TeX Workbench for MS-DOS PC's

\TeX and all its companions offer an enormous amount of possibilities. This is both an advantage and a disadvantage. The advantage is that almost anything is possible; the disadvantage is that you need detailed knowledge of all related programs to fully exploit the possibilities. The MS-DOS program 4 \TeX is an attempt to integrate all major \TeX related programs in a shell that shields you from the tedious and frustrating job of setting environment variables and program parameters.

TeX zonder omhaal; voor Atari ST en andere PC's (I)

Deze cursus is bedoeld als eerste kennismaking met TeX op een eenvoudige PC. Een harde schijf is niet nodig. De cursus is gebaseerd op de PD-TeX van Christoph Strunk voor Atari ST. De installatie en de functie van de basis bestanden van TeX worden behandeld. Deze cursus is een gecorrigeerde herdruk van een serie artikelen in het blad ST uitgegeven door: Stichting ST. Daar zijn de in de tekst genoemde schijfjes te verkrijgen.

The Future of T_EX

T_EX and the other members of Knuth's Computers & Typesetting family are arguably amongst the most successful examples of computer software in the world, having been ported to almost every conceivable operating system and attracting an allegiance that verges on the fanatical. Development work on this family has now ceased, and many members of the computer typesetting community are concerned that some action should be taken to ensure that the ideas and philosophy enshrined in T_EX are not allowed simply to fade away. In this paper, we discuss some of the options available for perpetuating the T_EX philosophy, and examine the strengths and weaknesses of the present T_EX system. We conclude by postulating a development strategy for the future which will honour both the letter and the spirit of Knuth's wish that T_EX, METAFONT and the Computer Modern typefaces remain his sole responsibility, and at the same time ensure that the philosophy and paradigms which are the strengths of T_EX are not lost for ever by having artificial constraints placed on their evolution.

E- \TeX : Guidelines for Future \TeX extensions

With the announcement of \TeX 3.0, Don Knuth acknowledged the need of the (ever growing) \TeX community for an even better system. But at the same time, he made it clear, that he will not get involved in any further enhancements that would change the \TeX book. \TeX started out originally as a system designed to typeset its author's own publications. In the meantime it serves hundreds of thousands of users. Now it is time, after ten years' experience, to step back and consider whether or not \TeX 3.0 is an adequate answer to the typesetting requirements of the nineties. Output produced by \TeX has higher standards than output generated automatically by most other typesetting systems. Therefore, in this paper we will focus on the quality standards set by typographers for hand-typeset documents and ask to what extent they are achieved by \TeX . Limitations of \TeX 's algorithms are analyzed; and missing features as well as new concepts are outlined.

The L^AT_EX3 Project

This is a brief sketch of the L^AT_EX3 Project: background, history, principles, aims and functionality. The new version of L^AT_EX is, like the current version, a freely available system for automated processing of structured documents, formatting them to the highest typographic standards by use of the T_EX typesetting software. Although its uses include a very large range of published documents, the importance of its unsurpassed ability to format mathematical formulas will not be forgotten in producing the new version. It is being produced by an international group of volunteers under the technical direction of Frank Mittelbach.

PostScript en \LaTeX , de komplementariteit in praktijk

In dit artikel toon ik aan hoe PostScript en \LaTeX een hoge graad van samenhangigheid bezitten, die het mogelijk maakt om de voordelen van beide systemen te combineren om documenten elektronisch te publiceren. Allereerst vertel ik hoe, samen met de dvi-vertaler dvips en het stijlbestand epsfig, het invoegen van PostScript materiaal in een (La) \TeX bestand heel eenvoudig wordt. Samen met de stijl rotating kan men bijna elk gewenst globaal grafisch effect verkrijgen zonder per-se een PostScript guru te zijn. In het tweede gedeelte van het artikel geef ik een kort overzicht van enkele op PostScript gebaseerde stijlbestanden, die bepaalde nuttige visuele effecten genereren, zoals grijze raampjes, kleurentypografie en het overdrukken van tekst. In het laatste gedeelte toon ik hoe eenvoudig het is om PostScript fonts te gebruiken in \LaTeX met het nieuwe fontselectie systeem (NFSS) van Frank Mittelbach.

When T_EX and METAFONT Work Together

When T_EX and METAFONT communicate to each other, they can do more together than they can alone. This presentation concentrates on two illustrations of this principal, and urges readers to come up with more. When T_EX becomes sensitive to information passed to it from METAFONT, it is possible to prepare diagrams and figures using METAFONT and then to have T_EX prepare labels which can be precisely positioned within the figure. When communication goes the other way, T_EX and METAFONT can prepare special purpose fonts which (among other things) can be set along curved baselines. Illustrations of both techniques are presented.

Typesetting number sequences; FIFO and some more

Typesetting sequences of numerical values, represented via symbolic names which get their values on the fly, is dealt with. The sorting of the sequence is done by a linear sorting algorithm, of complexity $O(n^2)$. Three or more consecutive numbers are typeset as a range. The objective was to encode typesetting sequences of numbers as simple, concise, general, compatible, modular, orthogonal, and ..., as possible in $\text{T}_{\text{E}}\text{X}$.

Sorting in BLUe

Macros for number and lexicographic sorting are supplied. Data can originate from the copy, from file, or generated automatically. Lexicographic sorting allows words with ligatures and diacritical marks. Applications treated are: sorting with respect to report generation with \TeX as a database tool, sorting and compressing \index.\TeX , Knuth's index reminders file, and sorting control sequences separately. It is illustrated by various examples that a set can be sorted within \TeX once the ordering of the set is defined and encoded in a comparison macro, in compliance with the parameter macro $\backslash\text{cmp}$.

AMS BLUes; professionals at work

The significance of the American Mathematical Society for the $\text{T}_\text{E}\text{X}$ community at large, and more general the leading role of the AMS in the area of professional computer-assisted typesetting, is praised. AMS- $\text{T}_\text{E}\text{X}$, AMS- $\text{L}\text{A}\text{T}_\text{E}\text{X}$, their accompanying styles `amspt.sty`, respectively `amsart.sty`, as well as AMS fonts are discussed. AMS provides excellent user's and installation guides along with the software and fonts, all in the public domain. Despite the quality, an alternative approach - and in detail some alternative encodings - are provided. A publisher is strongly encouraged to take notice of the computer-assisted publishing activities of this pace-setting society. A new procedural idea with respect to specifying and formatting bibliographies, given a background file of all the references an author is familiar with, is proposed to suit the author and the publisher.

FGBBS zes maanden later

Henk de Haan en Frans Goddijn geven een uitleg over de werkzaamheden aan FGBBS. Nadat een directory met boeken op disk was gewist, werd de \LaTeX -bibliotheek van FGBBS belangrijk uitgebreid. Er werd voor bezoekers een mogelijkheid geschapen om zowel in fidonet als Internet berichten te lezen en te schrijven. Ook een systeem voor offline reading werd aangelegd.

Gebruik en Management van T_EX in een Unix omgeving

Een T_EX systeem op een Unix systeem omhelst tegenwoordig veel meer dan alleen het gelijknamige programma. Een goed geïntegreerde werkomgeving is mogelijk voor het produceren van een veelzijdig scala aan documenten. We bespreken de structuur van het T_EX systeem, de gangbare hulpmiddelen en pakketten eromheen, zoals printer drivers, previewers, font beheer, grafische pakketten, bibliografiebeheer, index beheer, spelling controle e.d. Verder besteden we aandacht aan de beheers- en installatie aspecten ervan, zowel voor een stand-alone systeem als voor een client-server omgeving met eventueel heterogene systemen.

\TeX zonder omhaal; voor Atari ST en andere PC's (II)

Deze cursus is een vervolg op die in MAPS 93.1. Na een inleiding in het eerste hoofdstuk werden toen in de volgende hoofdstukken behandeld: Boxen, METAFONT en PostScript, Figuren en een vreemd alfabet, en tot slot INIT \TeX en INIMF. In deze bijdrage vervolgen we met hoofdstuk 6: het maken van een mooie brief, niet via 'boxen' in \TeX maar m.b.v. \LaTeX . In hoofdstuk 7 bekijken we de 'artikel-stijl', waarschijnlijk de meest gebruikte vorm van \TeX . Dat leidt tot een vergelijking van \TeX en \LaTeX . En tot een alternatief: \TeX sis. Deze cursus is een herdruk van een serie artikelen in het blad ST uitgegeven door Stichting ST. Daar zijn de in de tekst genoemde schijfjes te verkrijgen.

Frequently Asked Questions about emT_EX

This is an edited version of a document called emT_EX-user Frequently Asked Questions. Eberhard Mattes sent this document on october 3rd, 1993 to the emT_EX-user list. In the community of dutch T_EX-users emT_EX is widely spread. So questions to the list are probably also valuable for many emT_EX-users without direct access to the list.

The Comprehensive T_EX Archive Network (CTAN)

This paper outlines the concept, development, and use of the Comprehensive T_EX Archive Network (CTAN) - a network-accessible archive for files related to the T_EX family of document processing. The CTAN is a coordinated effort among consenting well-known archive sites which provides quick identification and retrieval files in a consistent manner from hosts on different continents, thereby reducing overall network load and increasing speed of retrieval. Moreover, it provides users with a parallel archive structure between hosts with holdings which are generally synchronized to within 30 hours of one another. This is achieved by routinely mirroring one another's holdings, as well as mirroring other archives to maintain an up-to-date collection of files.

A Future for T_EX

The future of T_EX is invisibility. The role of T_EX should be similar to that of the microprocessor in a PC. The microprocessor is the heart of the system, but is completely invisible except for the sticker which says 'intel inside.' T_EX must be made invisible with appropriate front-ends. These front-ends should emphasize the manipulation of content over appearance and reverse the trend toward WYSIWYG (What You See Is What You Get) interfaces with their emphasis on manipulation of appearance. Content-oriented interfaces provide far greater user productivity than WYSIWYG systems, and T_EX is the ideal basis for such systems.

The ease of including graphics in T_EX documents using 4T_EX

In this paper we will show how 4T_EX can be used to incorporate graphics in T_EX documents. Using 4T_EX it not only becomes easy to include graphics in T_EX files, but also makes it possible to preview and print T_EX documents (including graphics) on any machine and any printer. For inserting graphics in T_EX documents, 4T_EX uses the style file figures.sty, the shareware programs T_EXCAD and GRAPHIC WORKSHOP, and the freeware programs: HP2XX, BM2FONT, PCLTOMSP, and GhostScript. All these programs are discussed and we also discuss how 4T_EX uses the strength of these programs to incorporate graphics in T_EX documents.

Customizing L^AT_EX lists

In this article, which is part of the third chapter of our forthcoming book ‘A L^AT_EX Companion’, we take a look at L^AT_EX’s list environments. First the various parameters and commands controlling the standard L^AT_EX lists, `enumerate`, `itemize`, and `description`, are discussed. Then the general list environment is introduced and we tell you how to build custom layouts by varying the values of the parameters controlling this environment.

L^AT_EX at WKAP in Dordrecht

In this article, I will explain a couple of things about the use of L^AT_EX at Wolters Kluwer Academic Publishers (WKAP), a scientific publisher in Dordrecht. WKAP came into existence in the '80s after the merger between D. Reidel Publishing Company, Martinus Nijhoff and Dr W. Junk. Each year, WKAP publishes approximately 200 scientific journals and about 500 books (in reality, 200 scientific journal titles translates into some 1200 journal issues).

Teaching Typography – The Didot Project

This paper briefly outlines the Didot project on teaching digital typography. A key issue, namely the nature of the interaction between computer and design specialists, is discussed and related to the type of material that could be included in a curriculum for digital typography. Teaching methods and material that have been developed in this area are outlined and an evaluation of one of these methods is described.

Use of T_EX and L^AT_EX within the NTG community

At the 1993 spring meeting of the Dutch T_EX User Group (NTG) the NTG Board was asked to find out in what way T_EX and L^AT_EX is used by its members. Main motivation for this question was to find out how important funding of the L^AT_EX-3 project for the members of NTG is. Therefore it was necessary to have insight in the use of T_EX and related products/macro packages. It was decided that the board should held a inquiry among the members and if possible present the results at the fall 1993 meeting. This article describes the results of the survey.

The making of the 4all \TeX CD-ROM

In about one half year the world's first turn-key \TeX system on CD-ROM was produced. It contains the ms-dos \TeX workbench 4 \TeX version 3.20 in perhaps the largest form ever, plus many \TeX sources that are valuable to any \TeX user. In this article we present a look behind the scenes, so you get some insight in the course of events that mark the production of NTG's first CD-ROM.

FGBBS: de jonge jarige

Stonden de eerste zes maanden van het FGBBS in het teken van onafgebroken uitbreiding van file- en berichtengebieden en het telkens vergroten van de beoogde gebruikersvriendelijkheid, het afgelopen halfjaar hebben we met succes gestreefd naar stabilisatie van het systeem, overigens zonder de actualiteit uit het oog te verliezen.

T_EX zonder omhaal; voor Atari ST en andere PC's (III)

T_EXDraw wordt getest. Veel Atari ST's worden gebruikt om elektronisch muziek te maken, op te nemen (MIDI) en af te drukken in muziekschrift. Dat afdrukken kan ook met T_EX. Uitbreidingen van T_EX zoals L^AT_EX, T_EXsis en MusicT_EX maken het zetwerk makkelijker en mooier, maar T_EX heeft ook meer werkruimte nodig. We maken een BigT_EX en een trefwoordenregister voor een lange tekst. Deze cursus is een herdruk van een serie artikelen uit het blad ST, uitgegeven door Stichting ST. Daar zijn de in de tekst genoemde schijfjes te verkrijgen.

T_EX zonder omhaal; voor Atari ST en andere PC's (IV)

Deze keer gaat het over een recent uitgekomen macro-pakket, dat L^AT_EX2e heet. Dit pakket vormt een krachtige set macro's, waarmee je zonder al te veel van T_EX af te weten goed uitzierende teksten kan produceren. Deze cursus is een herdruk van een serie artikelen uit het blad ST, uitgegeven door Stichting ST. Daar zijn de in de tekst genoemde schijfjes te verkrijgen.

L^AT_EX2e, an overview

This article gives an overview of the new or extended user commands available with L^AT_EX2e, the new L^AT_EX release, compared to the previous version L^AT_EX 2.09. After introducing the new preamble commands, the extensions for defining new commands and environments, and handling length and boxes are discussed. The new font selection commands are explained, both for text and math, and it is shown how to easily use different font families. A list of supported class and package files is given and new possibilities for controlling page contents and floats are discussed. Most of this material is described in much greater detail in ‘The L^AT_EX Companion’ and in the second edition of the L^AT_EX Reference Manual.

A brief guide to T_EX assistants

This paper offers a ‘back to basics’ overview of the various types of software which are of assistance to the T_EXnical writer on a personal computer (this includes Unix machines, but excludes, for instance, VMS or VM/CMS systems). It is based on a presentation to the October UK-TUG meeting, and I am grateful to the other speakers, and our chairman Allan Reese, for insights and news. I would also like to refer readers to the Dutch T_EX Group’s journal MAPS, whose issue 93.2 contains a variety of useful papers on T_EX interfaces, two of which are reproduced in Baskerville Volume 3.2 (December 1993).

Building virtual fonts with 'fontinst'

This document gives a brief overview of the fontinst package. The fontinst package is used to build virtual fonts (VFs) which allow PostScript fonts to be used as drop-in replacements for the Computer Modern fonts in \TeX . Below, I'll describe VFs briefly, and describe how they can be built using the fontinst package.

Making T_EX work

This article contains the Table of Contents, Preface, and Chapter 4 of 'Making T_EX Work' by Norman Walsh; published by O'Reilly and Associates (ISBN 1-56592-051-1). No effort has been made to preserve the 'look and feel' of the book in this text, and some simplifications have been performed (particularly with respect to special formatting issues and package names).

Typesetting Greek texts by $\text{T}_{\text{E}}\text{X}$ and \LaTeX

This paper contains some information on whatever exists for typesetting by $\text{T}_{\text{E}}\text{X}$ documents which contain entirely or in part Greek text. Those who would like to typeset Greek texts not by plain $\text{T}_{\text{E}}\text{X}$, but rather with \LaTeX , may find this short article quite useful as well.

BLUe's Verbatim

A suite of macros for verbatim mode is provided, which are simple, concise and flexible. The functionalities are: verbatim text, and file verbatim inclusion, with 'options' for numbering and enabling of metacode. Options can be supplied via the toks variable `\thisverbatim`, and globally via `\everyverbatim`. The place within ConT_EXt can be handled via the defs `\preverbatim` and `\postverbatim`. The macros are ConT_EXt independent and can be used at the inner level with AnyT_EX.

TUGboat BLUes

The significance of TUGboat for the $\text{T}_{\text{E}}\text{X}$ community at large is praised. (l)tugboat.sty, tugboat.cmn and the TUG authors' guide are discussed, next to their siblings (l)tugproc.sty and the option euro $\text{T}_{\text{E}}\text{X}$.sty. Article templates for the various 'styles as is' are provided. Independent and in addition to these I included customing files. Also included is my concrete proposal for a tug.ppt style-for preprints of tugboat.sty, and tugproc.sty, in the spirit of ams.ppt. Furthermore, a new and simple alternative to the handling of options for $\text{T}_{\text{E}}\text{X}$ is proposed, based on the toks variable `\this<foo>`, analogous to `\every<foo>`. This is applied to handling verbatims, with as a result a compact suite of verbatim macros to be used with Any $\text{T}_{\text{E}}\text{X}$.

LaTeX2e – Second Test Release

The second test release of LaTeX is now available. Notes about this release are at the end of this announcement. The first release revealed a few serious bugs and several other areas which need attention. Many people reported that documents and style files had been processed by the new system without serious problems; this includes one very important test – the original text of ‘The LaTeX Manual’! We can also report that this release has been tested with all the files in the LaTeX 2.09 test suite and produces only predictable differences in the output.

Report BachoT_EX'94

Education was about:

- survey of T_EX,
- Polish typographical tradition,
- L^AT_EX2e,
- LaMeX2e,
- Indexing and bibliography making,
- dvips use and so on,
- fonts with T_EX and PostScript,
- METAFONT.

The contributions to the conference were about:

- emerging GUST archive,
- L^AT_EX and Polish,
- AmS^IL^AT_EX.

Phil Taylor had the stage when talking in full colour about book design. Kees van der Laan talked about Manmac, and his BLUe system.

Report CyrTUG '94

A magnificent trip to get to know the CyrTUG and its chapters better. Not only Moscow, but also Kazan and St-Petersburg. The driving force is hosted at MIR. The cooperation of the JINR at Dubna and CyrTUG is bound to become beneficial. As usual there were courses around the conference. Issues discussed during the conference:

- \LaTeX developments,
- Use of colours,
- \LaTeX and PostScript,
- UNIX platforms next to DOS,
- Various user reports,
- BLUE's set of macros on top of manmac.

FGBBS: de kastelein

De komst van de 4allT_EX CD-ROMs heeft de afgelopen maanden voor veel nieuws gezorgd, ook op FGBBS. Het NTG schonk FGBBS een CD-ROM drive, waarop de 4allT_EX werd geplaatst. Inmiddels is de tweede editie 4allT_EX gearriveerd, en deze is in zijn geheel beschikbaar via het bulletin board systeem.

Makefont: a new 4T_EX utility

The second release of the 4allT_EX CD-ROM comes with 4T_EX 3.25. This version of 4T_EX has a new utility that is not described in the manual. In this note I will explain the use of this extra feature: Makefont. With the makefont utility it becomes easy to include whatever PostScript font you need into your (La)T_EX documents. If you have a complete font family of PostScript fonts you can also decide to develop your own style file and use this as your default font family (instead of the CMR family).

T_EX zonder omhaal; voor Atari ST en andere PC's (V)

T_EX kan niet alleen instructies uitvoeren maar ook vragen. Het resultaat hangt dan af van de antwoorden van de gebruiker: interactie. Als voorbeeld maken we een brief waarbij de gebruiker (die niets van T_EX hoeft te weten) nog de afzender en de geadresseerde kan aangeven. En ... T_EX doet niet moeilijk over Poolse accenten. Deze cursus is een herdruk van een serie artikelen uit het blad ST, uitgegeven door Stichting ST. Daar zijn de in de tekst genoemde schijfjes te verkrijgen.

\TeX zonder omhaal; voor Atari ST en andere PC's (VI)

METAFONT is een programma waarmee het mogelijk is om via wiskundig beschreven curves en oppervlakken lettertypes of andere symbolen te ontwerpen. Deze kunnen gebruikt worden in het zetprogramma \TeX . Dit artikel gaat niet in op het werkelijke ontwerp-proces en zelfs nauwelijks op de faciliteiten die METAFONT hiertoe biedt, maar op de vraag hoe METAFONT functioneert in de Atari-omgeving, gebaseerd op het Public Domain pakket van Christoph Strunk. Kortom: hoe kun je aan het werk met METAFONT? Deze cursus is een herdruk van een serie artikelen uit het blad ST, uitgegeven door Stichting ST. Daar zijn de in de tekst genoemde schijfjes te verkrijgen.

BLUe blood in math mode?

Some time ago I started work on a book (a collection of letters written by one of the most renowned Dutch publishers, Johan Polak) and at the time I was typesetting it in the Palatino font. Then I heard that the creator of Palatino, the world famous Hermann Zapf, has worked with Donald Knuth. What did they do, I wondered? Is $\text{T}_{\text{E}}\text{X}$ more famous than we think it is? Did the fingers of both geniuses touch in the creation of our Math fonts? The replies to my queries in TYPO-L were promising. You decide.

CijferBLUes: Verborgen schoonheid in L^AT_EX 2.09

Een toevallige samenloop van omstandigheden brengt een even verbluffend mooie als oeroude optie van T_EX aan het licht, die tot dusverre door bijna iedereen over het hoofd is gezien. Prachtige ‘hangende cijfers’ zijn in de standaard Computer Modern fonts al sinds jaar en dag beschikbaar, als *math italic*.

T_EX en SGML bij Elsevier Science

Dit artikel beschrijft enkele aspecten van Elsevier Science's electronic publishing programma. Alle tijdschriften in de Physics en Mathematics uitgeefprogramma's accepteren L^AT_EX files van auteurs en gebruiken die voor publikatie. De dvi files gebruiken PostScript fonts die gekombineerd zijn in in-huis ontwikkelde virtuele fonts. In andere wetenschappelijke disciplines worden auteurs files van een breed scala aan tekstverwerkings programmas geaccepteerd en gebruikt voor publikatie. In zijn toekomstige electronic publishing strategie kent Elsevier Science een centrale rol toe aan SGML. Alle binnenkomende artikelen zullen uniform gestructureerd worden met gebruik van SGML. Alle benodigde publikatietypen zullen uit deze ene bron worden gegenereerd. T_EX is een uitstekende formatter voor sommige van deze publikatietypen.

Headers and footers in \LaTeX

Standard \LaTeX offers the page styles empty, plain, headings and myheadings. For simple page layouts these suffice, but they are rather rigid. A more flexible page layout may be obtained by using the FANCYHEADINGS package. This article describes how to create advanced page headers and footers in \LaTeX documents by using this package. Some of the techniques described are also applicable with other page styles.

Plaatjes in een tekst

In deze artikel wordt eerst aandacht besteed aan de (beperkte) mogelijkheden die \LaTeX zelf biedt voor het maken van plaatjes. Soms zijn die voldoende, en dan is het wel zo gemakkelijk om die te gebruiken. Daarna wordt de rol van PostScript besproken bij het gebruik van plaatjes, al of niet in combinatie met \LaTeX . Vervolgens wordt een vijftal tekenprogramma's besproken waarmee interactief ingewikkeldere figuren gemaakt kunnen worden. Tenslotte wordt aangegeven hoe 'bitmaps' (letterlijke afbeeldingen van het scherm van een computer) als plaatje behandeld kunnen worden. Dit laatste is vooral van belang bij het schrijven van handleidingen voor programma's.

PPCH_TE_X: Chemische Structuurformules in T_EX

In dit artikel wordt een macropakket beschreven waarmee chemische (structuur)formules kunnen worden gezet. Dit pakket is te gebruiken bovenop Plain T_EX, L^AT_EX en andere pakketten. Het pakket is in eerste instantie ontwikkeld bovenop ConT_EXt.

This article is about a package for typesetting chemical formulas. The package has a multi-lingual interface. This means that all all commands and keywords can be toggled to English. Some day, this article and the manual will be translated in English too.

BLUe's Format

An independent format - blue.fmt - is proposed to assist authors with creating, formatting, exchanging and maintaining compuscripts during the lifephases of publications. The format builds upon manmac.T_EX and the functionalities provided by tugboat.sty. Experience gained by publishers has been picked up too, because of my in-depth study of the activities of AMS with respect to T_EX formatting. More recent work of Knuth and co-authors has been borrowed from gkpmac.T_EX. The design goal was to provide a format which suits me, which is easy to customize - to the world outside, and in general to changing circumstances - and which complies with the adages of software engineering. Another aim of blue.fmt is that it can be used throughout the lifecycle of publications on modest equipment to format articles, transparencies and you name it. The hoped for lifety is a lifetime. En-passant the design process is accounted for. New is the handling of a database of references - with cross-referencing - or pictures all in one-pass job.

De NTG op het World Wide Web

Het internet is een van de meest snel groeiende elektronische media. Dit is mede te danken aan het zogenaamde World Wide Web (WWW). In dit artikel wordt ingegaan op de functie van het Word Wide Web, het gebruikte tekstformaat (HTML) en de mogelijkheden die het voor de NTG kan hebben. Er wordt ingegaan op de huidige (experimentele) service en er worden een aantal mogelijke nieuwe toepassingen vermeld.

METAFONT's mode_def in action

In order to obtain maximum output quality when using METAFONT for rendering bitmapped fonts you need to specify the characteristics of the intended output device. This is done by defining a mode_def in which several variables are assigned. The meaning and effect of these variables are discussed in a case study of two types of laser printers.

Combining T_EX and PostScript

PostScript is becoming a de facto standard as a device independent page description language. By embedding PostScript elements in T_EX we can extend the use of T_EX to new areas of application. In the first part of the paper we give some general information about PostScript and its features. In the rest of the paper we present some of our own experiences and solutions in combining T_EX and PostScript:

- dictionaries, prolog files and how to save a lot of space with PostScript figures produced in CorelDRAW, Mathematica, ...;
- writing T_EX-PostScript macros, case: drawing graphs (combinatorics) in T_EX; PostScript error handling mechanism, an application in function graph drawing macro.

Portable Documents: Why Use SGML?

In this article we present a few ideas as a framework for the discussion of portable documents. We address a number of questions:

- What are portable documents?
- Who needs them, and why?
- How to produce them, now and in the future.

HTML & T_EX: Making them sweat

HTML is often criticised for its presentation-oriented conception. But it does contain sufficient structural information for many everyday purposes and this has led to its development into a more stable form. Future platforms for the World Wide Web may support other applications of SGML, and the present climate of popularity of the Web is a suitable opportunity for consolidation of the more stable features. T_EX is pre-eminently stable and provides an ideal companion for the process of translating HTML into print.

\LaTeX 2HTML ervaringen; Van Handleiding in \LaTeX tot Hulp Module op Internet

Welkom op de digitale snelweg! Steeds meer informatie wordt er aangeboden op het Internet, en met het uitgroeien van het Internet groeit de onoverzichtelijkheid. In dit artikel wordt een toepassing van \LaTeX 2HTML beschreven waarbij een \LaTeX document wordt omgezet naar een reeks goed gestructureerde pagina's op het World-Wide Web. Deze toepassing betreft een document die een handleiding is voor Internet-gebruikers (voornamelijk voor medewerkers van Laboratorium voor Analytische Chemie, KUN, Nijmegen). Er worden wat voordelen en voorbeelden van het \LaTeX 2HTML gebruik gegeven en hoe je het programma kunt aanpassen naar je eigen wensen. Bekijk de \LaTeX documenten ook eens op deze moderne manier en blader eens met de muis door je tekst, getransformeerd tot een digitaal wonder op je scherm. Oftewel: \LaTeX 2HTML2!

A World Wide Web Interface to CTAN

There are a lot of different software packages, style files, fonts, etc. in the CTAN archives. Finding the things you need in a timely fashion can be difficult, as I found out while writing *Making T_EX Work*. The ability to combine descriptions of packages with the directory listings from CTAN could help alleviate some of the difficulty. HTML, the document structuring language of the World Wide Web, provides one possible means of combining different views of the archive into a single vision. The CTAN-Web project is my attempt to provide this vision.

An Introduction to HyperT_EX

The popularity of the World-Wide-Web and the HTML hypertext language for electronic distribution of information over the internet has thus far been difficult to extend to scientific documents, in part because T_EX, the word processing language of choice for technical and mathematical documents, does not have the hypertext capabilities necessary for full integration into the WWW. HyperT_EX consists of a collection of extensions of T_EX to handle both internal and external (local or networked) hypertext, thus allowing the huge body of T_EX-based documents to be more fully integrated with the WWW. This introduction was originally prepared for the American Physical Society e-print meeting at Los Alamos, New Mexico, Oct. 15, 1994.

The Hyper \LaTeX Markup Language

Hyper \LaTeX is a little package that allows you to use \LaTeX to prepare documents in HTML (the hypertext markup language used by the World Wide Web), and, at the same time, to produce a fine printed document from your input. You can use all of \LaTeX 's power for the printed output, and you don't have to learn a new language for creating hypertext documents.

Conversion from WORD/WordPerfect to \LaTeX

Production of a large document with many contributors may require conversion of all submitted manuscripts into the same format, for example \LaTeX . A large proportion of manuscripts are submitted in the formats of WORD and WordPerfect, two very popular word processing programs. I will discuss different approaches converting such files to \LaTeX format. First of all the differences between the word processors MS-WORD and WordPerfect versus the document preparation system \LaTeX will be explained, and problems encountered during text conversion into \LaTeX will be discussed. The conversion can be done either by means of a separate program (external conversion) or using macros, style sheets and a printer driver from within the word processors (internal conversion). Advantages and disadvantages of both methods for different types of text elements such as plain text, lists, tables and mathematical formulas will be discussed. This is followed by an overview of the conversion programs currently available.

Scientific Word / Workplace 2.0.1; Whats new?

Scientific Word version 1.x from TCI Software Research has gotten improvements and an offspring. The improvements are not only better support for different \LaTeX styles and dialects but also more user conveniences and better stability. The offspring is Scientific Workplace, a similar Windows software package under Windows 3.1. But besides all the Scientific Word functions it also has a built-in Maple Version V interface and many Maple symbolic calculation functions. Not to forget that version 2.0.1. works fine under OS/2 Warp with all its speed and data exchange advantages.

Scientific WorkPlace; een eerste indruk

Het pakket SCIENTIFIC WORKPLACE, versie 2.0(SWP), vroeger Scientific Word, is een uitgebreide versie van een 'WhatYouSeeIsWhatYouGet' tekstverwerker gebaseerd op $\text{\LaTeX}2\text{e}$ en werkend onder Microsoft Windows. De uitbreiding bestaat uit een deel van een 'Computer Algebra' pakket, de kernel van Maple. Verder is er een programma om toetsen samen te stellen, uit databestanden met opgaven. Deze voorlopige test van versie 2.0 is uitgevoerd op een IBM compatibele PC, met een 486 processor en 8MB intern geheugen, door een persoon met $\text{\LaTeX} 2.09$ en Maple ervaring, maar zonder kennis van MSWindows ('waar is dat nou voor nodig...') of SCIENTIFIC WORKPLACE. Voor het installeren en testen zijn twee volle dagen gebruikt. Dit verslag geeft vanzelfsprekend slechts een eerste indruk van het pakket.

\TeX -verwerking in kleur

Vooraf beginnende \TeX -gebruikers ervaren de mix van commando's en tekst als verwarrend. Mede om die reden hebben wij zo'n vier jaar geleden onze tekstverwerker afgestemd op het gebruik van \TeX , door \TeX -commando's op een wat afwijkende manier weer te geven. Het blijkt dat, afgezien van aanvullende mogelijkheden om de syntax te controleren, het aantal fouten in commando's drastisch afneemt.

Een zwart-wit kijk op kleur

Wie tegenwoordig op een zwart-wit tv-toestel een uitzending volgt zal zich vaak tevreden moeten stellen met een weinig contrastrijk beeld. Na de introductie van de kleuren-tv is nog lang rekening gehouden met zwart-witkijkers. De keus van kleuren in decors werd mede afgestemd op de weergave in zwart-wit. Dit is niet verwonderlijk, omdat de zwart-witkijkers een ruime meerderheid vormden. Op papier lijkt zich een dergelijke ontwikkeling af te spelen. Voor kleurenprinters geschikte illustraties, kunnen op zwart-wit printers een matig beeld opleveren. Het is dan ook de vraag hoe we aan de 'wensen' van de overgrote meerderheid van zwart-wit printers tegemoet kunnen komen.

Genezen van WPosis – nu heb ik chronische T_EXitis...

Bij het vormgeven van een voorstel voor reglementen overschreed een verstokte WordPerfect-gebruiker de grenzen van zijn geliefde tekstverwerker. Frans Goddijn hielp hem aan de T_EX. In dit artikel geeft een nieuwe T_EX-gebruiker een globale indruk van zijn laatste ervaringen met WordPerfect en zijn eerste ervaringen met T_EX. Hij doet dit aan de hand van het werk aan een document waarin het mogelijk moest zijn om vele typografische middelen onafhankelijk van elkaar te gebruiken om verschillende soorten passages aan te duiden. Dit bleek in T_EX goed te realiseren, zij het met veel inspanning, en het resultaat was zeer bevredigend. Toen het eerste document eenmaal gereed was, bleek het bovendien daarna zeer eenvoudig om soortgelijke documenten te zetten.

The Scenario – in Three Versions; hhparmrk does it

During work towards a flexible document as a continuous report on a wide variety of contacts for the Meridian Arts Ensemble in New York, Frans Goddijn felt the need to tag and mark certain paragraphs for specific groups of readers. Herman Haverkort wrote a package for L^AT_EX₂e, hhparmrk, which facilitates this by offering the possibility to set various signs next to paragraphs. This article presents hhparmrk, gives examples of its use and a short manual. For the hackers among us some of the T_EXnical tricks involved behind the scenes are glanced at.

Sorting in T_EX's Mouth

T_EX's macro processor, the so-called mouth, can be used to perform very complex tasks. Because this part of T_EX's programming language is as powerful as a Turing machine, it is possible to implement algorithms using only T_EX's mouth. I will show how sorting algorithms can be implemented in a straight-forward and very elegant and under-standable way using only macros and macro expansion T_EXniques.

One by one the guests arrive

A plea is made for writing macros in plain T_EX sufficiently documented to be used with all flavours of T_EX.

BLUe's Format Databases

The backgrounds, use, and coding of BLUe's Format Databases have been discussed. Two kinds of databases have been introduced class I (data, such as addresses, references, and script parts for example pictures), and class II (macros, such as variant formats and tools). At the heart lies the selective loading $\text{T}_{\text{E}}\text{X}$ nique, which allows that only what is needed will be loaded on-the-fly. The data structures and operations on them have been treated. The use within the $\text{ConT}_{\text{E}}\text{X}$ t of typesetting scripts have been elucidated via examples. At the end the coding is explained.

BLUe's Index

The creation of a modest index within a one-pass $\text{T}_{\text{E}}\text{X}$ job is proposed. In general a proof run and a final run are needed. The markup for the index entries is the same as used by Knuth for The $\text{T}_{\text{E}}\text{X}$ book. The process is controlled by the tags: `\sortindex` and `\pasteupindex`. The file which emerges after `\sortindex` can be enriched by hand, for example to include 'see also' and the like. Sorting keys can be specified too, as well as items which have to be ignored for the sorting. The macros have been developed for use with English documents. To leave open the use with other languages the ordering has been parameterized in an ordering table.

BLUe's Letters

The backgrounds, use, design, and coding of BLUe's Letters format have been discussed. The purpose is to format a letter, merge it with address(es) from a database, and typeset it all with the appropriate background such as logo and the like, completely within $\text{T}_{\text{E}}\text{X}$. Separate labels can be obtained too, either specified by name or searched for by pattern.

BLUe's Reports

The backgrounds, use, design, and coding of BLUe's Reports format have been discussed. The purpose is to format a report as a compatible extension of the default note format of BLUe's format. As such it is an example of how to customize BLUe's format system with a format of your own. The differences have to do with not only using titles but also reusing the titles for table of contents, list of examples, and running headlines the preliminary pages and cover pages which are absent with the default note format appendices may contain collected information from the script such as answer to the exercises (similar as in The T_EXbook), table of examples, table of contents, and an index.

Paradigms: Two-part macros

The use of two-part macros in BLUE's format is discussed. First the reason why in general two-part macros are beneficial is explained. Practical examples from the T_EX-NL discussion list have been treated. The automatic generation of a one-part macro on top of two-part macros is given. The impossibility of reusing copy with different catcodes in T_EX is mentioned and illustrated with an example from the T_EXbook.

Paradigms: Parameterization I – options

The use of options in BLUe's format is discussed. A survey is given of how Knuth coped with the functionality of optional arguments in T_EX and manmac. As an extension to T_EX's `\every<tag>` the BLUe's `\this<tag>s` are introduced, with the advantage of simpler handling of arguments. It is contrasted with the use in TUGboat's style files and AMS's `ppt.sty`.

\TeX Plotter – a program for creating 2D and 3D pictures

The MS DOS program which creates 2D and 3D \TeX pictures for the plots of functions of two variables $f(x,y)$ is described. In comparison with Gnuplot this program enables to plot the equilines (2D view) and the surface (3D view) pictures correctly and without memory overflow even for complex cases. The input is the ASCII file which contains the data points (X_{ij}, Y_{ij}, Z_{ij}) of the function $z = f(x,y)$ calculated over non-regular quadrangular mesh. The output is the ASCII file which contains the required picture in \TeX format. The program has a flexible menu driven user interface and enables to create and to preview the output pictures with a variety of styles. At the time being the program supports \LaTeX commands, EPIC/EEPIC macros and $\text{em}\text{\TeX}$ specials. In future the program should support \TeX graphical tools like MF \Pi C, Pi \TeX and EPS-files.

VFComb – a program for design of virtual fonts

The MS DOS program which enables to simplify the design of the virtual fonts is described. Its main purpose was to facilitate the integration of CM-fonts with cyrillic LL-fonts created by O. Lapko and S. Strelkov but it can be used for various applications. It uses the information from TFM-files (converted to ASCII form by TFtoPL) and the ASCII data files created by the User on its input, and produces the VPL-file on its output which can be converted to the virtual font using VPtoVF. The characteristic feature of the program is that it can assemble the font ligature tables and user defined ligature tables for the characters extracted from various fonts and combine the metric information from various TFM-files. VFComb supports the full syntaxis of PL-files and VPL-files as it was defined by D.E. Knuth and adds new commands like symbolic variables or conditional operators, which simplifies the creation and the debugging of the virtual fonts.

The status of Babel

In this article I will give an overview of what has happened to Babel lately. First I will briefly describe the history of Babel; then I will introduce the concept of 'shorthands'. New ways of changing the 'language' have been introduced and Babel can now easily be adapted for local needs. Finally I will discuss some compatibility issues.

Upages – plain T_EX for professionals

When I have started my professional typography works in plain T_EX, I found many things, which are done in each document. Some of them are language specific or trivial, but there exists many topics, which are strongly untrivial, and often required. T_EX has many limitations, but there is (in recent time) nothing better in whole the world. Thus, we have powerful macro language but we haven't easy way to do many things: references, contents, page offsetting, interpretation of text token by token, cooperation with PostScript devices, device independent color and line drawing capabilities, easy box rotation and landscaping, making sheets and booklets, making other margins than 1in, creating cropmarks, color signatures, color separations etc.

Certainly, there is many powerful macro systems, but they are very big, often slow, and cancels many capabilities of plain T_EX. I have been particularly inspired by them, and particularly by some macros for plain T_EX. But many of these macros are incompatible, if you want to use two of them, because one overwrites settings of the second.

This all is good reason to write powerful macros these things instead of creating trivial macros twice a month. Then you needn't spend much time to correct bugs caused by these trivial macros. That's why I have written my upages.T_EX macros. This chapter doesn't want to be a manual to these macros, but only an introduction with examples.

upages.T_EX macros consists on more parts. In this text I will describe the most powerful and interesting parts of them. I hope that my macros will greet many plain T_EXists. They makes easy to prepare documents and to make hooks and patches.

A practical introduction to SGML

SGML, the Standard Generalized Markup Language, deals with the structural markup of electronic documents. It was made an international standard by ISO in October 1986. SGML soon became very popular thanks in particular to its enthusiastic acceptance in the editing world, by large multi-national companies, governmental organizations, and, more recently, by the ubiquity of HTML, Hypertext Markup Language, the source language of structured documents on WWW. This article discusses the basic ideas of SGML and looks at a few interesting tools. It should provide the reader with a better understanding of the latest developments in the field of electronic documents in general, and of SGML/HTML in particular.

From \LaTeX to HTML and back

Both \LaTeX and HTML are languages that can express the structure of a document, and similarities between these two systems are shown. A detailed study is made of the \LaTeX 2HTML program, written by Nikos Drakos, that is today the most complete utility for translating \LaTeX code into HTML, providing a quasi-automatic translation for most elements. A discussion of a few other tools for translating between HTML and \LaTeX concludes the article.

Pascal: formatting Pascal using T_EX

This paper is based on our ideas about how a system which formats programs written in a structured language must work. Particularly, tools which help in typesetting texts where algorithms are described. Most of our ideas have been put in practice in the pascal system, which automatize the elegant layout of Pascal programs. This system is programmed as a T_EX macro package.

Use of T_EX as database with AnyT_EX

The use of BLUe's format databases is treated. A new issue is introduced since the emerge of BLUe's Format system this spring. Boolean tags can be added to for example address.dat entries to denote fields and their contents. Together with `\search` one can easily obtain the list of names - and via these names the full entries, i.e., the addresses - of those who have not paid their membership fee, for example.

Data with daT_EX

The authors explain how to handle data in T_EX documents, in particular, how to avoid ever having to type in - and check! - the same data or text twice. These data may be stored in ordinary (non-T_EX) databases, in ASCII files arranged according to the easy daT_EX format, or in the T_EX document itself. daT_EX works in plain T_EX and is supposed to work in L^AT_EX.

Modifying L^AT_EX

This is an updated version of a document that was first written to be part of the distribution of the new standard L^AT_EX. It was produced in response to suggestions that the modification and distribution conditions for the files in our system should be similar to those implied by Version 2 of the GNU General Public Licence, as published by the Free Software Foundation.

Although we are by now convinced that the principles described here are sound, the detailed consequences of these for the distribution and modification conditions are still evolving. Thus this article should not be treated as a definitive version of these conditions, even at the date of its publication.

The proposed T_EX Directory Structure

The concept of a standardized T_EX directory structure is explained.

Occam's Razor and macro management

The philosophical principle known as Occam's Razor asserts that entities should not be multiplied beyond necessity. The $\text{T}_{\text{E}}\text{X}$ utility OCCAM is a tool to eliminate from a collection of supporting $\text{T}_{\text{E}}\text{X}$ macros (composite commands) those that are unnecessary in a given typescript. Hopefully, it will serve to (a) let Plain $\text{T}_{\text{E}}\text{X}$ users produce typescripts which can be electronically posted in a compact form that is nevertheless autonomous and perfectly archival, and (b) to simplify a macro package before making modifications for a special purpose.

The OCCAM utility will ultimately be programmed entirely in $\text{T}_{\text{E}}\text{X}$ language to assure that it is universally available. Today it is just an evolving prototype implemented with a bit of help from an editor (on Macintosh) that has a programmable control language based on GREP.

To achieve reasonably automatic functioning of OCCAM, not requiring surveillance by a $\text{T}_{\text{E}}\text{X}$ programmer, it is necessary to maintain a carefully structured master version of each macro package involved; this .occ version can double as the documented source version of the package.

A package for Church-Slavonic typesetting

The multilingual ability of \TeX is one of its most important properties. Due to \TeX it became possible to produce high-quality books in many different languages (sometimes with very exotic grammatic rules). For more than 10 years of its existence \TeX became a real polyglot and it seems that it doesn't want to stop evaluating. In this paper one more, may be rather exotic, example of practical usage of \TeX is considered, and also many ideas and solutions which result from 5-year experience of \TeX using.

The W95 environment

Since 1992 the “WORKSHOP 9x” seminar takes place at the Czech Technical University (CTU) every year. The aim of this wide seminar is to give all the CTU researchers or teams an opportunity to present their research projects in twenty minutes of speech and two pages of proceedings of the seminar. I solved the technical problem of making the proceedings using \LaTeX . As the number of contributions increases year by year and the time for making the book is limited some automation of the typesetting process was and still is necessary. The W94 and W95 are attempts to transfer part of the typesetting work from the final typesetter to the authors. The W9x is simple single-purpose user-interface between \LaTeX and the MS-DOS user who may know nothing about \TeX and \LaTeX . Some experiences (both technical and psychological) of using this system in the two last years are discussed in the paper and may be useful for organizers of seminars, conferences etc. where contributors are not \TeX users and the proceedings are to be made with \TeX .

MusiX \TeX , even more beautiful than Music \TeX for music typesetting

MusiX \TeX is a new music typesetting package derived from Music \TeX , but it provides more beautiful scores than Music \TeX did. While Music \TeX was a single pass package, MusiX \TeX is a three pass system: the first pass performs a rough \TeX ing which reports the spacings of each music section, the second pass is a computation of the best note spacings, and the third one is the final \TeX ing process. The beauty of single notes does not significantly differ from Music \TeX , but slurs are much more beautiful, and notes are regularly spaced instead of being irregularly spaced with glue.

e- \TeX : a 100%-compatible successor to \TeX

e- \TeX is the first concrete result of an international research & development project, the NTS Project, which was established under the aegis of DANTE during 1992. The aims of the project are to perpetuate and develop the spirit and philosophy of \TeX , whilst respecting Knuth's wish that \TeX itself should remain frozen.

Typesetting commutative diagrams

There have been several efforts aimed at providing \TeX and its derivatives with a suitable mechanism for typesetting commutative diagrams, with the consequent availability of several macro packages of widespread use in the category theory community, and a long debate about the best syntax to adopt for commutative diagrams in \LaTeX 3 has taken place during 1993 in the CATEGORIES discussion list. From the user's point of view, however, there is not much guidance when it comes to choosing a macro package, and even after a decision is made, the conversion of diagrams from the particular conventions of a macro package to another macro package's conventions may prove to be rather hard.

Typesetting commutative diagrams is a surprisingly difficult problem, in comparison with \TeX macro packages for other purposes, as judged by the amount of code needed and years of development invested. The existing macro packages for typesetting commutative diagrams are reviewed in this paper and they are compared according to several criteria, among them the capability to produce complex diagrams, quality of the output diagrams, ease of use, quality of documentation, installation procedures, resource requirements, availability, and portability. The compatibility of the different macro packages is also analyzed.

When METAFONT does it alone

Combining METAFONT and \TeX when typesetting text and graphics together is shown on several occasions to bring very impressive results. A. Hoenig presented a method for communication between \TeX and METAFONT in order to solve two problems otherwise difficult to handle within \TeX or METAFONT alone: label placement for diagrams generated by METAFONT, and curvilinear typesetting. We show that the method for curvilinear typesetting (involving three passes in Hoenig's approach) can be considerably simplified by using the extended ligature mechanism of \TeX 3, and that a single METAFONT pass is actually sufficient, with quite a simple interface on \TeX 's side. Institutional seal text placement can be realized as a simple METAFONT application using this method. While PostScript offers ready-to-use easy solutions to this class of problems, METAFONT solutions can still be preferable to PostScript because of the ability of adding META-ness, e.g., by introducing second-order magnitude corrections/distortions to the letters and/or logos in order to enhance legibility when used in smaller sizes.

Knuth meets NTG members

On January 6th 1996, Kees van der Laan informed the NTG that Donald Knuth would be in Holland in March. Knuth was invited by the Mathematisch Centrum (MC, nowadays called Centrum voor Wiskunde en Infor-matica, CWI) because of CWI's 50th anniversary. Both Knuth and Mandelbrot were invited as speakers at the celebration. The NTG noticed that this was an exceptional occasion to organize a special meeting with Knuth for all Dutch $\text{T}_{\text{E}}\text{X}$ and METAFONT users who would like to meet the Grand Wizard himself. Fortunately Knuth accepted the NTG invitation and so a meeting was organized in 'De Rode Hoed' in Amsterdam on March 13th. About 35 people from all over the country and even from Belgium joined to meet Knuth. Everything was recorded on both video and audio tape by Gerard van Nes. Christina Thiele volunteered to write this transcript.

Van dictaat tot boek

In 1980 werd ik docent natuurkunde aan de HTS te Arnhem voor de afdeling elektrotechniek. Toendertijd werd een leerboek gebruikt dat heel aardig de meer traditionele componenten behandelde, maar bijna niets wist te melden over wat tegenwoordig in een schakeling zit: dioden, transistoren en dat soort componenten. Een eerste navraag bij landelijke collega's leverde wel een soort werkgroepje op, maar niet de gezochte 'nieuwe' leerstof. Dus maar zelf schrijven. Dat moet in eerste instantie letterlijk worden opgevat, maar ook met een tekstverwerker als \LaTeX moet veel zelf worden gedaan. Wat begon rond 1985 als dictaat, per hoofdstuk afgedrukt, eindigde rond 1995 als boek: twee delen 'Elektron natuurkunde' in de serie natuurkunde voor het HBO bij de Educatieve Uitgevers.

The \LaTeX 2HTML translator: An Overview

\LaTeX 2HTML is, as its name implies, a translator which converts a standard \LaTeX document into Hypertext Markup Language (HTML), for incorporation into the World-Wide Web. Like \LaTeX , it is freely available software, supported by highly dedicated volunteers. Unlike \LaTeX , it is currently available only on UNIX platforms.

Typografisch programmeren

In dit artikel wordt de ontwikkeling van een interactief document beschreven. De getoonde voorbeelden demonstreren de kracht van $\text{T}_{\text{E}}\text{X}$ als typografische programmeertaal. Omdat dergelijke documenten het moeten opnemen tegen (vaak dedicated) programma's, kan het ontwikkelen ervan worden omschreven als typografisch programmeren.

Paradigms: The winds and halfwinds – Details matter

The implementation of the turtle graphics idea in plain $\text{T}_{\text{E}}\text{X}$ as part of BLUe's format graphics facilities has been discussed. Examples are the (recursive) coding of the Pythagorean and trinary trees. As spin-off the implementation of a (binary) chart – a binary tree with labels – is given. Rotation of trees goes simply by renaming the wind directions.

BLUe-2-~~L~~A_TE_X - expansion and some more

Conversion should not be a problem. It is best to use a general accepted tool, which comes with a preprint format. Until BLUe's format is generally accepted a BLUe script has to be converted to comply with publishers' formats to get it out. Conversion via T_EX's expansion is exercised in this note, with as result a plain T_EX Convector Assistant, in the spirit of AWK. In netland it does not matter because BLUe's format system is available from CTAN and NTG's 4allT_EX CD-ROM, and therefore everybody can format BLUe scripts, and no conversion is needed.

Graphics and T_EX – a reappraisal of METAFONT

It is all about the author's first steps in METAFONT, for creating graphics to be included in T_EX documents, with a wink to . The graphics comprises 2D pictures and 2.5D images of 3D objects via projection techniques. Learning METAFONT was much easier than learning T_EX. Included examples are: cat, Hilbert curve, and Gabo's linear construction in space no 2. A few highlights on macro writing in METAFONT have been selected. The appendix contains the table of contents of my anthology.mf file of examples.

Page layout in \LaTeX

This article describes how to customize the page layout of your \LaTeX documents, i.e how to change page margins and sizes, headers and footers, and the proper placement of figures and tables (collectively called floats) on the page. Originally this was the documentation of the fancyheadings package. It did contain also other info, e.g. advanced use of marks. It has now been upgraded to include more, e.g. the handling of floats. The fancyheadings documentation has been upgraded to conform to version 2 of this package 1 . For reasons of compatibility with certain operating systems, the name of the package has been changed to fancyhdr. Although this paper uses \LaTeX 2e commands, most of the techniques can be used with older \LaTeX versions with appropriate changes.

Colored Verbatim

This module implements (just another) verbatim environment. Especially when the output of T_EX is viewed on an electronic medium, coloring has a positive influence on the readability of T_EX sources. About half of the module is therefore dedicated to typesetting T_EX specific character sequences in color. In this article I'll present some macro's for typesetting inline, display and file verbatim. The macro's are capable of handling <tabs> too.

De spelling van het lot

Het SPELLINGBESLUIT gepubliceerd in Staatsblad 394 (Besluit van 19 juni 1996, houdende voorschriften omtrent de schrijfwijze van de Nederlandse taal) heeft niet alleen gezorgd voor veel gekrakeel tussen neerlandici, maar het vormde ook een buitenkans voor uitgeverijen van werken als HET GROENE BOEKJE (binnen zes maanden 500.000 verkochte exemplaren). Kleinere ondernemingen brachten floppies op de markt met woordenlijsten en algoritmen. Intussen sloeg een groepje mensen (bestaande uit - in alfabetische volgorde - Erick Branderhorst, Erik Frambach, Frans Goddijn, Hans Hagen, Gerard van Nes, Piet Tutelaers, Jacoline van Weelden en Peter van Zeeland, en terzijde gestaan door Hans Linders) de handen ineen om te komen tot een vrij beschikbare, zo correct mogelijke Nederlandse woordenlijst.

Heeft T_EX nog toekomst?

This article is meant as a starting point for further discussion on the future of T_EX. The author wrote this expose after a discussion in the NTG board concerning the future of T_EX and the NTG.

Do journals honor \LaTeX submissions?

The survival of \LaTeX in the academic world will depend on \TeX and \LaTeX evolving towards changing publishing practices, but also on publishers actually accepting \LaTeX submissions. Much has been said about the former, with a recent feature number of TUGboat addressing the subject of electronic publishing. When it comes to the latter issue, however, it is often taken for granted that scientific journals honor \LaTeX submissions. An extensive research over the Internet reveals that, on the contrary, at the turn of the century many journals still regret to accept \LaTeX submissions, sometimes preferring RTF or even bare ASCII sources to \TeX or \LaTeX . This note discusses some of the issues behind this situation and compiles all journals known to the au-thor that accept electronic submission of \LaTeX articles in source form, thereby complementing the \TeX counterpart.

Virtual Fonts, Virtuous Fonts

Virtual fonts allow us to use all digital fonts with \TeX , even non- \TeX ones, and do much more for us. What are virtual fonts? Several projects grant us necessary experience with them. This document comprises somewhat less than half of the similarly named chapter which will appear in the book \TeX Unbound: \LaTeX and \TeX Strategies for Fonts, Graphics, and More, by Alan Hoenig, to be published in early 1997 by Oxford University Press. This excerpt is simplified so that it may be printed using the standard suite of \TeX fonts; the original depends heavily on PostScript fonts and the author's style file for its typesetting. Consequently, some displays could not be included. For any questions or comments, please contact the author at ajhjj@cunyvm.cuny.edu.

A \LaTeX tour, part 1: the base distribution

In this article I hope to give a ‘guided tour’ around the files that make up the basic \LaTeX distribution. Subsequent articles in this mini-series will cover other packages by the \LaTeX development team, and also some of the main contributed packages.

A \LaTeX tour, part 2: the Tools and Graphics distribution

In the previous article in this series I started by giving a description of the files in the 'base' \LaTeX distribution. In part 2, I shall cover the 'tools' and 'graphics' distributions. These are distributed in the tools and graphics subdirectories of the CTAN directory macros/ \LaTeX /packages. Although these files are not part of the minimal base distribution they should normally be included in the \LaTeX installation at any site. The \LaTeX book assumes that at least the graphics distribution is installed.

FRISTI

This article gives an impression of my way of designing and typesetting very small telephone and address lists, birthday calendars etc. Design considerations and typesetting tricks are presented. The latter include macros which define the sheets (from A4 to credit card and even key fob size), macros to process data records (typically specified in a separate file) in various ways, and macros to stuff and stow data in very limited space.

Paradigms: Just a little bit of PostScript

It is all about creating EPS - with graphics - to be merged with (La)T_EX scripts. The emphasis is on creating raw PostScript for simple symmetrical pictures. Asides, like incorporating accurate graphs of math functions, typesetting text along curved paths, or tables set sideways, next to reverse video, clipping and tiling have been addressed. A poor man's MFtoEPS approach is touched upon: (declarative) METAFONT into (imperative) PostScript.

Gezeefd uit de T_EX-NL discussielijst (1997)

In 1993 publiceerde Philippe Vanoverbeke in de MAPS tweemaal een selectie van berichten uit de T_EX-NL lijst. Nu, een poosje later, wordt de draad weer opgepakt. Een aantal oplossingen, hints en gouden tips over onderwerpen waarvan je weleens denkt: “hoe zat dat ook alweer?” Deze informatie is, samen met nog veel meer van dergelijke waardevolle berichten uit T_EX-NL, ook na te lezen op FGBBS in het berichtengebied FGBBS.ARCHIVE. Opvallend is dat in bijna alle gevallen het snelste en definitieve antwoord wordt gegeven door Piet van Oostrum (piet@cs.ruu.nl, <http://WWW.cs.ruu.nl/~piet>), zonder wie T_EX-NL niet het zeer nuttige en snelle medium zou zijn dat het nu is. OOSTRUM-NL zou ook een goeie naam zijn.

The L^AT_EX Graphics Companion

This handy reference describes techniques and tricks needed to illustrate L^AT_EX documents, and answers common user questions about graphics and PostScript fonts. It provides the first full description of the standard L^AT_EX color and graphics packages, and shows how you can combine T_EX and PostScript capabilities to produce beautifully illustrated pages. Following the successful format of *The L^AT_EX Companion*, this new book will be an invaluable L^AT_EX resource for incorporating pictures into text.

Using fonts in METAPOST – one way of forcing T_EX to include the right fonts

METAPOST graphics can contain T_EX produced text. Unfortunately, when including such graphics in T_EX documents, only DVIPS knows how to include the right glyphs. This article describes a method (and macros) to handle glyph inclusion independent of DVI drivers. The ConT_EXt module described here can be used in other macro packages as well. (A later version of this module implements a more efficient mechanism as well as some additional functionality.)

T_EX, BLUes, and Jazz – a search for values

How to use T_EX for a database oriented application is shown by the example of a collection of Jazz CDs. The request was to provide (part) of the title of a tune and to let T_EX response with all the CDs which contain that tune. Only a few lines of code was all that was needed to fulfill the purpose. The example might serve as a user-oriented stepping stone for understanding how in BLUe's format T_EX as database engine has been used.

Gegevensverwerking met daT_EX

De auteurs geven een inleiding in daT_EX. Dat is een verzameling macro's waarmee gegevens eenvoudig kunnen worden verwerkt in een T_EX of L^AT_EX file. Twee voorbeelden illustreren de grote mogelijkheden van deze macro's. Een uitgebreide handleiding en de macro's zelf staan op www.xs4all.nl/~rhkoning.

lyx: een front-end voor \LaTeX of een textprocessor?

Dit artikel is een recentie van het programma LyX. Lyx is een programma voor X windows dat dient als (bijna-)WYSIWYG schil bovenop \LaTeX . De huidige stabiele beta-versie, die hier dan ook besproken wordt, is versie 0.10.7. Het programma wordt geschreven door een aantal auteurs onder 'leiding' van Matthias Ettrich (ettrich@informatik.uni-tuebingen.de).

kdvi: een verbeterde xdvi

kdvi is een aangepaste versie van xdvi, een DVI previewer voor het X Window Systeem. De belangrijkste verandering is het gebruik van een 'echte' grafische interface ter vervanging van de nogal primitieve widgets van xdvi. kdvi is *alpha* software, de huidige versie is 0.2. De auteur is Markku Hihnala (mah@ee.oulu.fi).

DVIPS manual – good old portability, and some more

Portable manuals should be written and marked up in this way. Just a few macros to take care of the formatting. The manual can be easily personalized. The dvips manual has been made available as a BLUe report with an index – based on IR-s by Rokicki – and a ToC. Both are welcome when using the manual. Some experience in using dvips under UNIX is also reported: overprinting a picture, adding a caption, and aligning pictures. A pitfall in using psfig is mentioned as well.

How to handle compound and bounded words

The dutch language permits words to be combined in many ways. To permit such compound words to be hyphenated properly, a versatile mechanism is presented, that handles all kind of compound and boundary situations. Although part of ConT_EXt, this module can be used in other packages as well.

Een moderne toren van Babel

In deze voordracht zal ik kort aandacht besteden aan ‘wat is $\text{T}_{\text{E}}\text{X}$ ’, ‘wat is $\text{L}_{\text{A}}\text{T}_{\text{E}}\text{X}$ ’. Hierbij komt ook het concept van ‘structuur markup’ aan de orde. Vervolgens zal ik ingaan op de geschiedenis van het babel pakket. Aan de hand van een aantal voorbeelden zal ik toelichten welke problematiek zich voordoet bij het op een correcte wijze vormgeven van documenten waarin meerdere talen worden gebruikt.

Book Design for T_EX Users – Part 1: Theory

Book design cannot be taught; it can only be learned, preferably by critical study of as many books as possible. Of all the elements which make up a book, white space is frequently the least considered and the most important. *Avant garde* designs are compared and contrasted with more conservative and traditional approaches. Three key elements: *uniformity*, *information* and *structure* are identified, and ‘good design practice’ discussed in terms of each of these.

Book Design for T_EX Users – Part 2: Practice

In the predecessor to this paper, three fundamental concepts of *uniformity*, *information* and *structure* were introduced, and general guidance given on each of them. In this paper, more practical advice is given, specifically in two areas: guidance on actual dimensions, proportions and layout; and guidance on implementing some of the ideas through the medium of the T_EX language. Finally, some difficult (and even insoluble) problems in layout are discussed.

Toolbox (1997)

Er lopen in de wereld zo veel T_EX-gebruikers rond, dat het zelden zal voorkomen dat een normale gebruiker de eerste is die een probleem tegen komt. Meestal zal dit probleem ook al door iemand anders zijn opgelost en vaak staat de oplossing op de 4allT_EX, T_EXlive of een andere cd-rom. Indien daar niet te vinden is staat er vast wel een oplossing op ctan of één of andere Internetsite. Het probleem zit hem niet in de beschikbaarheid, maar in het opsporen van de oplossing. Artikelen in maps zijn daarvoor natuurlijk een belangrijke informatiebron. Sommige oplossingen zijn echter zo eenvoudig dat er nooit een artikel aan gewijd zal worden. Over een draadstriptang valt nu eenmaal niet al te veel te vertellen. In Toolbox zal niet alleen de draadstriptang worden besproken, maar ook het gebruik van lucifers om het plastic van het einde van het snoer af te branden. Stuur ook informatie over uw favoriete tools naar mij op, zo kan Toolbox een belangrijke informatiebron worden over utilities, macro's en andere eenvoudige trucs voor de gewone T_EX-gebruiker. Deze keer is de spil van het verhaal PostScript.

Quark Xpress: een vakantieliefde

Hoe prachtig “ons T_EX” ook is, in de wijde wereld daarbuiten is het onbekend. De meeste drukkers en grafische ontwerpers weten niet eens wat het is. Pas als je het magische woord “Quark Xpress” laat vallen, tel je voor hen mee. Afgelopen zomer kocht ik een manual van meer dan 600 pagina’s en verslond dit in de vakantie. Wat heeft dat pakket dat wij niet hebben?

ConT_EXt voor beginners

Hierna volgt een introductie op ConT_EXt. Deze handleiding is, net als ConT_EXt, beschikbaar in het Nederlands en Engels en binnenkort ook in het Duits. Dit is de eerste versie; op- en aanmerkingen zijn dan ook welkom.

Color in professional print production

This paper takes a look at issues arising in color printing, such as color models, color conversion and color separation. Increasingly, it is feasible to perform these functions on existing PostScript files, independent of the authoring software. The PDF format plays a key role in this trend.

Typografische scanning

Dit artikel geeft een beschouwing over “Nederlandse” typografie, aan de hand van een aantal scans van in Nederland gepubliceerde boeken en tijdschriften uit de afgelopen drie eeuwen. Het artikel laat een aantal traditionele typografische vormen zien, met toevoeging van wat commentaren over het gebruikte proces.

Vlakverdeling in ConT_EXt

This article is actually chapter 3 of the ConT_EXt reference manual, typeset in the MAPS layout. Attention will be paid to defining layout specific areas, rearranging pages, locating logos, typesetting on a grid and adding cutmarks.

Arab \TeX - Typesetting Arabic with Vowels and Ligatures

We present a \TeX macro package for generating the arabic writing from a standardized ASCII input notation. It can handle partial or full vocalization, and generates automatically most of the common ligatures. There is limited support for Farsi, Urdu, and Pashto. Arab \TeX is compatible with Plain \TeX and also most \LaTeX environments; arabic and other material can be mixed freely. For special purposes the standard transliteration can be additionally generated. Arab \TeX uses no preprocessor and thus should be compatible with any \TeX implementation that allows dynamic loading of additional macro files and fonts.

PPCH_TE_X – a macropackage for typesetting chemical structure formulas with T_EX – release 2

A few years ago PPCH_TE_X was introduced. This generic macro package can be used to typeset chemical structure formulas. Currently the NTG supports a dedicated mailing list, to which quite some users subscribed. Here we present the long awaited for english update of the manual. The dutch and german manuals were already available for about a year and can be uploaded from the NTG server.

Gezeefd uit de TEX-NL discussielijst (1998)

Dit is het vierde deel uit een serie die in 1993 door Philippe Vanoverbeke in de MAPS is gestart. Philippe maakte een selectie van berichten uit de TEX-NL lijst. Een aantal oplossingen, hints en gouden tips over onderwerpen waarvan je weleens denkt: “hoe zat dat ook alweer?” In de MAPS van voorjaar 1997 stond deel 3. Voor deze aflevering is een aantal berichten gezeefd uit TEX-NL van maart 1997 tot maart 1998. Tenzij anders is vermeld, zijn de onderstaande antwoorden van Piet van Oostrum. Omdat het wat bewerkelijk is om sommige trucs over te tikken, staat dit artikel ook op FGBBS.

BLUe's OTR for notes: back-to-the-roots

The back-to-the-roots OTR for BLUE's notes is discussed. It consists of Plain \TeX 's OTR for 1-column and the compatible extension as given in the \TeX book for 2-columns. Only the pagebody differs: 2-columns instead of 1-column. This replacement is aimed at facilitating a personalized preprint OTR, such that BLUe can easily adapt it. The modified `blue.tex` will be distributed by CTAN, and NTG's 4All \TeX CD-ROM.

Toolbox: let's keep things plain

This Toolbox follows the eclectic approach that most readers will know from previous ones. Without aiming to give a comprehensive oversight of the logic behind them, I present some plain \TeX -commands that can be used directly in \LaTeX . As the editors of this journal decided to make English the preferred language for contributions, this column is no longer in Dutch. However, as far as my limited command of the language allows, I will try to keep the tone informal and the discussion accessible to novice users.

Parameterized data for tables in T_EX – Dynamics, aha!

The issue of generating and using parameterized data for tables in T_EX is elaborated upon. The automatic insertion of markup along with the use of parameterized markup and the `\btable` macro is not the issue, but are prerequisites. `\btable`'s use, along with the automatic insertion of markup in the data as such, can be seen as tools, stepping stones, which made it possible to concentrate on pure data generation, or its use in typesetting tables by T_EX.

Poor man's cyrillics on a Mac - T_EXing English and Russian

The typesetting in T_EX of English mixed with Russian is discussed for a Macintosh. Starting from the WNCY-fonts only a few extra control sequences have to be remembered for the keyboarding. The approach is suitable for all machines which have the WNCY-fonts. Email in cyrillics can be handled by formatting via pdfT_EX and sending the .pdf file as attachment in a MIME message.

Minimal markup – expansion in the gullet, aha!

A plea is made for a reappraisal of T_EX's capabilities of expansion in the gullet of minimal marked up scripts into complete marked up scripts. Attention is focused on expansion of implicitly marked up table data by spaces and e-o-l-s into data separated by `\cs` and `\rs`, the abstract but explicit column and row separators, respectively. The ultimate aim is that the processing tool can't be distilled from the 'marked up' script.

Catching up – PDF and HTML at the heart

New hardware not only urged me to get T_EX & Co running again, in a richer environment, but I had also to catch up with developments since. Most noteworthy in relation with T_EX and documents, are the acceptance of the PDF exchange format and the HTML format, next to the realization of multi-media.

The T_EX backend for Jade and the JadeT_EX macros

Jade is an implementation of the DSSSL specification, and includes a T_EX backend; the JadeT_EX macro package is needed to process the Jade T_EX output. We describe how Jade and JadeT_EX work together. This article was written for the newsletter of the International SGML Users Group.

De NTG en het Internet

De NTG is niet alleen met webpagina's op het Internet aanwezig, maar ook middels een aantal discussielijsten. In dit artikel wordt kort aangegeven wat een discussielijst is, hoe je je aan- en afmeldt en wat je te wachten staat na aanmelding. Tevens wordt een overzicht gegeven van de in Nederland aanwezige $\text{T}_{\text{E}}\text{X}$ -gerelateerde lijsten.

Gezeefd uit de TEX-NL discussielijst

Dit is het vijfde deel uit een serie die in 1993 door Philippe Vanoverbeke in de MAPS is gestart. Philippe maakte een selectie van berichten uit de TEX-NL lijst. Een aantal oplossingen, hints en gouden tips over onderwerpen waarvan je weleens denkt: “hoe zat dat ook alweer?” In de MAPS van voorjaar 1998 stond deel 4. Voor deze aflevering is een aantal berichten gezeefd uit TEX-NL van maart 1998 tot januari 1999. Met dank aan Piet van Oostrum die opnieuw de meeste antwoorden aandroeg, en aan de andere actieve abonnees van TEX-NL!

How to install a Type1 font using fontinst

In this brief tutorial I will describe how a PostScript Type 1 font can be made available to \TeX using the fontinst-utility (version 1.8). I will not delve into the technical details of this program or the exact functionality of each of the font files used during this process, as those aspects of font-installation are described in other articles in this issue of MAPS. I will not delve into the advanced features of fontinst either, but rather will provide a hands-on tutorial.

Fonts in ConT_EXt

This article is the revised chapter 5 of the ConT_EXt reference manual, typeset in the MAPS layout. We will pay attention to all kind of font switching, fine tuning, and also provide some background information. Special attention is paid to the mapping of font names to files and some words are spent on encodings. This text is typeset in Lucida Bright but within the layout specification of the MAPS.

A short introduction to font characteristics

Almost anyone who develops an interest in fonts is bound to be overwhelmed by the bewildering variety of letterforms available. The number of fonts available from commercial suppliers like Adobe, URW, LinoType and others runs into the thousands. A recent catalog issued by FontShop alone lists over 25.000 different varieties. And somehow, although the differences of the individual letters are hardly noticable, each font has its own character, its own personality. Even the atmosphere elucidated by a text set from Adobe Garamond is noticably different from the atmosphere of the same text set from Stempel Garamond. Although decisions about the usage of fonts, will always remain in the realm of esthetics, some knowledge about font characteristics may nevertheless help to create some order and to find out why certain design decisions just do not work. The main aim of this paper is to provide such background by describing the main aspects that might be used to describe a font.

4Spell, a spell-checker for Windows 95/98/NT

In this paper we will describe the features of 4Spell 1.1, a Windows spell-checker for T_EX documents. Since there aren't many good spell-checkers around and since 4Spell only works on Windows platforms, we will also explain how the spell-checking is done. This should make it possible to write a spell-checker for other platforms (why not use perl and become platform independent :-). 4Spell is part of the new 4T_EX for Windows (release expected by the end of March 1999). We realized, however, that this tool could be useful for people who do not want to use 4T_EX and hence we made it a stand-alone freeware program.

Optimizing T_EX code

Macros can be collected in macro packages. These packages can be stored in a form that permits fast loading. Although T_EX is already pretty fast, for demanding applications it makes sense to speed up T_EX to the max. Switching to e-T_EX and beyond is one way to achieve this, another way can be found in optimizing the macro code by means of a dedicated program. Currently the combination of both can speed up T_EX runs by at least 10%.

The NTG MAPS bibliography – from SGML to T_EX to PDF

A few years ago, the NTG decided to put their MAPS volumes on the internet in the PDF file format. At about the same time, it was decided to build the associated bibliography in such a way that it could be used to produce both a HTML and PDF document.

Recently, the MAPS bibliography has been converted to a proper XML document source. In the process, the descriptions were made as consistent as possible. The XML source was used as input for a PDF document, that provides extensive browse and search options. This PDF file, along with the MAPS articles, is provided to NTG members as an additional service.

In this article the electronic NTG MAPS will be presented and the specific characteristics of the production process will be explained. Also, some of the complicating aspects will be discussed. I assume that the reader is familiar with SGML and T_EX. The focus will be on the interface between SGML, T_EX and PDF.

4 \TeX 5.0 for Windows and the 4all \TeX CDroms

Every year many software distributors launch a new version of their software products. They all tell you that there are fundamental improvements and bug fixes and that you have to upgrade immediately. With the release of edition 5 of 4all \TeX you could ask yourself what this new edition offers as compared to e.g. the older versions of 4all \TeX and the \TeX -live CDrom. Below we will give a summary of all of the goodies of the new 4all \TeX distribution and give you pointers to the internet where you can find more information.

Toolbox: the toolbox?

This MAPS is about the $\text{T}_{\text{E}}\text{X}$ Toolbox, about other programs than $\text{T}_{\text{E}}\text{X}$ itself. So this MAPS's toolbox should probably deal with this kind of material. As a consequence this toolbox is even more eclectic than earlier ones. First I will show you how I make mailings to NTG-members, by combining Excel and $\text{L}^{\text{A}}\text{T}_{\text{E}}\text{X}$. Next I will present the most ugly regular expression I know of, and finally I will say something about using makefiles.

DTP with T_EX

A set of simple macros is presented, in the style of modular programming, to make it easy to put texts at arbitrary positions on the page, without being restricted by formatting rules. This is not only useful for single-page documents like announcements and business cards, but also for designing stationery with letterheads or printing labels. The method is based on putting kerned texts in boxes with zero horizontal and vertical size and staying in vertical mode. This works with plain, and any other, T_EX and can be combined with any other document formatting.

An Extended Maths Font Set for Processing MathML

Last years autumn, work started on a new set of mathematical fonts that are intended to cover the full range of characters included in MathML as well as those included in the proposals for mathematical extensions in the next version of Unicode.

This paper presents the first result of that work: A new Times-compatible maths font set consisting of about 1500 symbols and a few alphabets; along with a collection of \TeX macros to use them.

These fonts are donated to the public domain by Kluwer Academic Publishers and are available in both METAFONT source and Adobe Type 1 formats.

Using Emacs and AucTeX for preparing L^AT_EX documents

Users of T_EX and L^AT_EX can be helped very much by an editor that knows about the specifics of these packages. For instance it can do syntax coloring so that the user sees immediately the difference between normal text and T_EX commands; it can insert skeletons for often used commands and environments in order to prevent missing elements (e.g. missing `\end` parts), etc.

This article describes the use of the Emacs editing environment with the AucTeX package for the preparation of L^AT_EX documents. The main characteristics of Emacs are discussed, followed by a more detailed description of the facilities that AucTeX offers to assist the author of L^AT_EX documents. Finally we describe how AucTeX can be customized to support your own or external commands and L^AT_EX packages.

The Design and Use of a Multiple-Alphabet Font with

The project aims to offer open and flexible means for typesetting different scripts. By working at several different levels, it is possible to offer natural support for different languages and scripts, and strictly respect typographical traditions for each of them. This is illustrated with a large PostScript Type 1 font for the commonly used left-to-right non-cursive alphabets, called `omlgc` (Latin-Greek-Cyrillic). This font, which more than covers the Unicode sections pertaining to those alphabets, as well as those of IPA, Armenian, Georgian and Tifinagh (Berber), is built-virtually-out of smaller glyph banks. The typesetting engine, based on that of \TeX , is used to print documents using this font. The characters can be accessed either directly, or through the use of filters, called Typesetting Processes (OTPs), which are applied to the input stream.

T_EX in Polish

Writing in Polish with T_EX requires a few tricks. In Polish you need several accents that are often not available in 'standard' fonts. Some T_EX macros can solve this problem more or less. We will show the pros and cons. Another 'problem' is input encoding. One can use 8-bit input in combination with the corresponding codepage definition, or a 7-bit encoding with a few extras to make typing easier. Both methods will be discussed. This article reflects the content of a lecture held at the NTG meeting on 11 November 1999.

Toolbox

This toolbox contains some varia. First I discuss some reactions on remarks I made in an earlier toolbox. Next, Hans Hagens `texexec` is used in the following section to create EPS and PDF files from METAPOST source. Files created this way are often more usefull than the EPS files METAPOST itself creates. How to prepare a single source file for usage with both traditional \TeX and `pdfTeX` is discussed next. I also show how easy it is to set up a font different from Computer Modern for typesetting simple mathematics, pay some attention to a failed attempt to install a TrueType font and present a small PostScript header file that can be used to produce watermarks.

Making stand alone METAPOST graphics

When a METAPOST graphic uses fonts, the PostScript file is not self contained and hardly usable outside $\text{T}_{\text{E}}\text{X}$. One can however use $\text{T}_{\text{E}}\text{X}$ itself, or actually pdf $\text{T}_{\text{E}}\text{X}$, to create such a graphic. Although this method uses an Con $\text{T}_{\text{E}}\text{X}$ t module, the solution provided here is independant of this macro package. The macros responsible for the process are collected in the file `mptopdf.tex`.

Typesetting CD labels

Now that CD burners are becoming standard equipment in personal computers, there is a need for software to typeset CD labels. Of course, one can just squeeze a normal paragraph of text in the confines of a label, but it would be much more elegant to set the text to use all the available space. In this short article I will explain the macros that I wrote during a Christmas holiday, and that contain a few neat tricks.

The ultimate loop macro

The plain $\text{T}_\text{E}\text{X}$ format contains a `\loop` macro that has been a source of frustration and puzzlement to users ever since. Its syntax is somewhat strange, you have to insert an `\if...` condition in it but cannot use `\else`, and nested use of the macro runs into various problems. In this article I will describe my own improved loop macro, which I've called `\repeat` to prevent confusion.

Literate Programming

This article is a short introduction to the theory and practice of a programming style known as Literate Programming; a style that changes the focus of writing programs away from telling a computer what to do and toward explaining to a person what it is we are telling the computer to do. Literate Programming overcomes the limitations inherent in presenting traditionally structured program text. Using a balanced mix of informal and formal methods, literate programs are presented in a way suited for human understanding. Processing a literate program source results in both a nicely typeset document describing the parts of the program in an order that elucidates their design, and source code in an order in which it will compile.

Gezeefd uit de TEX-NL discussielijst

This is part seven in a series of articles started in 1993 by Philippe Vanoverbeke. Philippe selected a number of messages from the TEX-NL mailing list which deserved to be remembered and looked up by readers of MAPS. Solutions, hints and tips. MAPS of fall 1999 had part 5. This installment more or less covers August 1999 through July 2000. During a hectic year I had missed most messages and working through the backlog for this article provided me with a useful and time-consuming opportunity to see what I would have missed otherwise. Questions and answers are marked in twins but sometimes a reply poses a new question, invoking one more answer, making for an instructive thread. As before, honorary member Piet van Oostrum, and also Hans Hagen are always helpful members of the list. To them and all the others feeding the list with their stimulating questions and helpful answers thanks!

A macro routine for writing text along a path in METAPOST

In this article we show a general macro written in *pure METAPOST* for putting *any* text using *any* font over *any* path. The routine will be explained in detail and some graphics will be included for clarifying purposes. Very special thanks are due to Maarten Gelderman who has made the final translation with the biggest care and interest.

MetaFun, Chapter 3: Embedded graphics

This article is a nearly 100% copy of chapter 3 of the MetaFun manual. This chapter discusses a few alternative ways to define and include METAPOST graphics in a document. This article contains some colors, so if you want to get the real picture, you should fetch the MetaFun manual from www.pragma-ade.com (beta manual download page). The MetaFun macros (METAPOST as well as $\text{T}_\text{E}\text{X}$) are part of the regular Con $\text{T}_\text{E}\text{X}$ t distribution.

Pattern Generation Revisited

The program PatGen, being nearly twenty years old, doesn't suit today's needs: it is nearly impossible to make changes, as the program is highly optimised (like \TeX); it is limited to eight-bit encodings; it uses static data structures; reuse of the pattern technique and packed trie data structure for problems other than hyphenation (context dependent ligature handling, spell checking, Thai syllabification, etc) is cumbersome. Those and other reasons explained further in the paper led us to the decision to reimplement PatGen from scratch in an object-oriented manner (like NTS - New Typesetting System reimplementaion of \TeX) and to create the PATtern LIBrary PatLib and the (hyphenation) pattern generator based on it. We argue that this general approach allows the code to be used in many applications in computer typesetting area, in addition to those of pattern recognition, which include various natural language processing, optical character recognition, and others.

T_EXlib: a T_EX reimplementation in library form

I first came across the need for a T_EX in library form when I was thinking about developing a graphical real-time front-end to T_EX (the T_EXPerfect project, more info at <http://texperfect.sourceforge.net>). A quick survey (on the comp.text.tex newsgroup) showed that other projects could have benefited from a library providing T_EX type-setting capabilities, and I thus decided to develop T_EXlib as a separate project from T_EXPerfect. A ‘call for developers’ on the same newsgroup provided the project with developers/consultants/helpers.

From database to presentation via XML, XSLT and ConT_EXt

Much data exists only in databases. A familiar example is an address list. Every once in a while this data must be presented to humans. To continue with the address list example, annually an address list must be printed and mailed. In this article I attempt to give an exhaustive overview of going from structured data through ConT_EXt to output.

Usage of MathML for paper and web publishing

The Mathematical Meta Language (MathML) of the World Wide Web Consortium (W3C) based on XML has gained more support in the last months. Looking at the W3C's list of software which supports MathML one sees that the number of applications which can produce MathML is rather long, but the list of applications supporting typesetting of MathML is rather short.

The Euromath System – a structured XML editor and browser

The Euromath System is an XML WYSIWYG structured editor and browser with the possibility of $\text{T}_\text{E}\text{X}$ input/output. It was developed within the Euromath Project and funded through the SCIENCE programme of the European Commission. Originally, the core of the Euromath System was based on the commercial SGML structured editor Grif. At present, the Euromath System is in the final stage of re-implementation based upon the public domain structured editor Thot and XML. During the re-implementation process several principal differences between the basic features of Thot and the basic purposes of the Euromath System had to be resolved.

Instant Preview and the T_EX daemon

Instant Preview is a new package, for use with Emacs and xdvi, that allows the user to preview instantly the file being edited. At normal typing speed, and on a 225MHz machine, it refreshes the preview screen with every keystroke. Instant Preview uses a new program, dvichop, that allows T_EX to process small files over 20 times quicker than usual. It avoids the overhead of starting T_EX. This combination of T_EX and dvichop is the T_EX daemon. One instance of the T_EX daemon can serve many programs. It can make T_EX available as a callable function. It can be used as the formatting engine of a WYSIWYG editor. This talk will demonstrate Instant Preview, describe its implementation, discuss its use with L^AT_EX, sketch the architecture of a WYSIWYG T_EX, and call for volunteers to take the project forward.

T_EX and/or xml: good, bad and/or ugly

As a typesetting engine, T_EX can work pretty well with structured input. One can build interfaces that are reasonably well to work with and code in. XML on the other hand is purely meant for coding, and the more rigorous scheme prevents errors and makes reuse easy. Contrary to T_EX, xml is not equivalent to typesetting, although there are tools (and methods) to easily convert the code into other structured code (like HTML) that then can be handled by rendering engines. Should we abandon coding in T_EX in favor of xml? Should we abandon typesetting using T_EX in favor of real time rendering of relatively simple layout designs? Who are the good and bad guys in that world? And even more importantly: to what extent will document design (and style design) really change?

T_EX Top Publishing: an overview

T_EX is used for producing a broad range of documents: articles, journals, books, and anything you can think of. When T_EX came around, it was no big deal to beat most of those day's typesetting programs. But how well does T_EX compete today with mainstream Desk Top Publishing programs? What directions will publishing take and what role can T_EX play in the field of typesetting? What are today's publishing demands, what are the strong and what are the weak points of good old T_EX, and what can and should we expect from the successors of T_EX?

T_EX in teaching

A well-known slogan in language technology is ‘parsing-as-deduction’: syntax and meaning analysis of a text takes the form of a mathematical proof. Developers of language technology (and students of computational linguistics) want to visualize these mathematical objects in a variety of formats. We discuss a language engineering environment for computational grammars. The kernel is a theorem prover, implemented in the logic-programming language Prolog. The kernel produces L^AT_EX source code for its internal computations. The front-end displays these in a number of user-defined typeset formats. Local interaction with the kernel is via a tcl/tk GUI. Alternatively, one can call the kernel remotely from dynamic PDF documents, using the form features of Sebastian Rahtz’ hyperref package.

Directions for the T_EXLive system

This paper is about the current status of the T_EXLive software. The first part of the paper will address the structured description of its content and how the Windows 1 setup program can use it. The past experiments with the Windows installer have revealed that the problem was harder than expected. The new T_EXLive 6 description files will allow a more effective way to use the setup program. Some further enhancements are even scheduled. The second part of the paper will address a set of possible extensions to the Web2C/Kpathsea pair (read it as a call for code contributions!). Some aspects of its use were not foreseen when it was devised and it may be time for an enhancement.

DCpic, Commutative Diagrams in a (La)T_EX Document

DCpic is a package of T_EX macros for graphing Commutative Diagrams in a (La)T_EX or ConT_EXt document. Its distinguishing features are: the use of PICT_EX a powerful graphical engine, and a simple specification syntax. A commutative diagram is described in terms of its objects and its arrows. The objects are textual elements and the arrows can have various straight or curved forms. We describe the syntax and semantics of the user's commands, and present many examples of their use.

A Tour around the NTS implementation

NTS is a modular object-oriented reimplementation of $\text{T}_{\text{E}}\text{X}$ written in Java. This document is a summary of a presentation which shows the path along which the characters and constructions present in the input file pass through the machinery of the program and get typeset. Along the way the key classes and concepts of NTS are visited, the differences with original $\text{T}_{\text{E}}\text{X}$ are explained and the good points where to dig into the system are proposed.

Math typesetting in \TeX : The good, the bad, the ugly

Taking the conference motto as a theme, this paper examines the good, the bad, and the ugly bits of \TeX 's math typesetting engine and the related topic of math fonts. Unlike previous discussions of math fonts, which have often focussed on glyph sets and font encodings, this paper concentrates on the technical requirements for math fonts, trying to clarify what makes implementing math fonts so difficult and what could or should be done about it.

Typography and production of manuscripts and incunabula

This paper describes how the modern type of books slowly came into existence during the middle ages. The first printers modeled their products on these handwritten books but needed - in time - some adjustments because of the differences in production between a manuscript and a printed book and because of the differences between producing for a patron or for an anonymous mass market.

Reintroducing type 3 fonts to the world of T_EX

Nowadays, a great number of documents are produced every day. Many authors would like their documents to stand out from the rest not only by content but also by typographic design. For this purpose one may use decorative letters, ornaments, dingbats and special fonts. If each document would have to look different from all the others a great many fonts and font deviations are needed. This could be achieved by combining the METAPOST language with the type 3 font format. This new font creation technology enables users endless single-use-only variations in weight and width, style and size, and in color. A new level of control over the embellishment level of fonts in documents is thereby achieved.

Letter from Knuth

A facsimile copy of a letter by Donald E. Knuth to Siep Kroonenberg about the EuroT_EX2002 proceedings. In the letter, dated 26 November 2001, Donald E. Knuth congratulates Siep Kroonenberg on the "most beautiful design and production of the EuroT_EX2001 proceedings." He further describes how both he and Mrs. Knuth love its look and feel. The letter is hand written with a pencil on the personal stationery (Donald E. Knuth, Professor Emeritus of The Art of Computer Programming) of the Stanford University in Stanford, California. Although the actual text of the letter is somewhat more concise than this abstract, it is a must-see for any T_EX user.

The euro symbol

When Patrick Grundlach posted a nice MetaPost version of the euro symbol to the ConT_EXt discussion list, he added the comment "The official construction is ambiguous: how thick are the horizontal bars? How much do they stick out to the left? Is this thing a circle or what? Are the angles on the left side of the bars the same as the one on the right side? ..." The alternative below is probably not as official as his, but permits a finetuning. You are warned: whatever you try, the euro is and will remain an ugly symbol.

Doing it my way: a lone T_EXer in the real world

While a world-renowned standard in many academic fields, Don Knuth's much acclaimed typesetting system is almost unknown in most parts of the real world, where many a document designer has achieved professional success without ever hearing (let alone pronouncing) the word 'T_EX'. Outside academia, the lone T_EXer faces not only compatibility headaches, but also outright incomprehension from his customers, colleagues, or competitors: why would anyone want to use T_EX to produce memos, two-color newsletters, full-color brochures, overhead transparencies, and other items - in short, anything but books that contain a lot of mathematics? As a consultant in professional communication, I have been using T_EX for all documents I have produced for my clients and for myself during the last ten years or so. Though it has turned out to be most successful, this approach is seen by most as a mere idiosyncrasy. And yet, the systematic use of my own T_EX and PostScript programming gives me three unequalled advantages over using off-the-shelf software: I travel light, I can go anywhere I please, and I guarantee I'll get there.

Drawing effective (and beautiful) graphs with T_EX

A standard approach to producing documents that include illustrations consists in typesetting text with specialized typesetting software (such as T_EX) and inserting illustrations created with different, equally specialized software. To better integrate the illustrations into the typeset page, it would be nice to be able to produce or modify them directly with the typesetting software. Drawing graphs with T_EX, for example, would allow one to set them `\hsize wide` and `0.75\hsize high`, position labels exactly `\baselineskip` below the horizontal axis, and, especially, typeset all annotations with the same fonts, sizes, and mathematical beauty as the rest of the document. The hybrid T_EX and PostScript macros presented in this paper take advantage of T_EX's power to graph and annotate data sets in a variety of ways in order to produce effective, beautiful, well-integrated graphs. They use T_EX to draw all horizontal and vertical lines (axes, tick marks, grid lines) and set all annotations, and PostScript to draw the data, as markers, lines, and areas. While fairly simple, they have been successfully harnessed to appear in a wide range of real-life applications, up to logarithmic graphs and (with some patience) complex multipanel displays. Of course, the macros are a tool for drawing final graphs rather than exploring or transforming data sets.

Figures

Within the $\text{T}_{\text{E}}\text{X}$ community there is a widely used database for bibliographic references, $\text{BIB-T}_{\text{E}}\text{X}$, but not for figures. To manage figures $\text{ConT}_{\text{E}}\text{Xt}$ now supports a figures database. The database is setup in XML and converted to an interactive PDF figure library featuring ordered displays and a search mechanism. From the library, figures can be included easily in $\text{ConT}_{\text{E}}\text{Xt}$ documents as long as both the PDF and the XML files remain present.

A do-it-yourself thebibliography in ConT_EXt

Moving from L^AT_EX to ConT_EXt is not really simple but to return from ConT_EXt to L^AT_EX would have been equally hard were it not for a publication by Berend de Boer in MAPS 24 explaining how to do L^AT_EX things in ConT_EXt. Only one thing was missing, a do-it-yourself thebibliography. Hans Hagen had a solution which is described below.

Mac OS X als T_EX platform

Nu het Macintosh platform tot Unix is bekeerd en ingebouwde ondersteuning heeft voor pdf, bezit de Mac hele goede papieren als een platform voor T_EX. Het programma T_EXShop is hiervan het bewijs.

Configuration

Texmf trees can make a \TeX installation more maintainable. With creative use of environment variables, it is possible to run different versions and different configurations in different xterm or console windows.

Introduction

Deze bibliografie omvat alle artikelen die in de eerste 24 nummers van NTG's tijdschrift MAPS zijn verschenen, plus de artikelen gepubliceerd in de proceedings van de EuroT_EX-conferentie in 1995, die door de NTG is georganiseerd. De bibliografie omvat in totaal ruim 700 artikelen.

This bibliography contains all the articles published in the first 24 issues of NTG's journal MAPS, plus the articles from the proceedings of the EuroT_EX conference in 1995, which was organized by the NTG. In total it contains over 700 articles.

We raden aan om Acrobat Reader in te stellen op 'Full Screen' (via 'View' menu) of op 'Fit in Window'. 'Full Screen' kan weer verlaten worden door op Esc te drukken.

We recommend that you set Acrobat Reader's view to 'Full Screen' (through 'View' menu) or to 'Fit in Window'. From 'Full Screen' you can return to window view by pressing Esc.

Door middel van indexen op titels, sleutelwoorden en auteurs kunnen artikelen eenvoudig opgezocht worden. Daarnaast kan gebruik worden gemaakt een standaard zoekfunctie door op de knop 'search' te klikken. Door te klikken op de knoppen 'previous' en 'next' kan achteruit c.q. vooruit gebladerd worden.

Indexes on titles, keywords and authors can be used to search for articles. A standard search feature is also available by clicking on the 'search' button. The buttons 'previous' and 'next' can be used to move backwards and forwards.

Met de knop 'publications' kan naar een overzicht van alle tijdschriften worden gesprongen. De knoppen 'keywords', 'authors' en 'titles' kunnen gebruikt worden om naar een van de indexen te springen. Met de 'exit' knop kan het PDF-bestand gesloten worden.

The button 'publications' takes you to an overview of all journals. The buttons 'keywords', 'authors' and 'titles' can be used to jump to one of the indexes. The 'exit' button can be used to quit the PDF file.

De informatie over publicaties staat in de rechterkolom en bevat de volgende items:

Information about articles can be found in the right-hand column. It consists of the following items:

Sleutelwoorden: als er driehoekige pijltjes bij staan dan zijn er meer artikelen met dit sleutelwoord. Door op zo'n pijltje te klikken wordt naar het vorige of volgende artikel met dit sleutelwoord gesprongen.

Keywords: triangular arrows indicate that there are more articles supporting this keyword. By clicking on such an arrow you can jump to the previous or next article supporting this keyword.

Auteurs: ook hierbij kunnen driehoekige pijltje staan waarmee naar andere artikelen van dezelfde auteur kan worden gesprongen. Door op een auteursnaam te klikken wordt gesprongen naar de auteursindex.

Authors: again triangular arrows are used. They can be used to jump to articles written by the same author. By clicking on an author's name you can jump to the authors index.

Tijdschrift, nummer en jaartal: deze spreken voor zich. Door op tijdschrift of jaartal te klikken wordt gesprongen naar een overzicht van alle artikelen in het betreffende tijdschrift.

Journal, volume and year: these need no explanation. By clicking on journal or year you can jump to an overview of all articles published in the same journal.

Paginanummers, taal en omvang: de paginanummers in het betreffende tijdschrift worden gegeven, evenals de taal waarin het artikel is geschreven (Engels of Nederlands), en de omvang van het PDF-bestand in kilobytes.

Page numbers, language and size: the page numbers of the article within the journal are given, along with the language in which the article was written (English or Dutch), and the size of the PDF file in kilobytes.

Door op de knop ‘view’ te drukken wordt het betreffende artikel getoond. Onthou dat in Acrobat Reader vanuit een getoond artikel teruggesprongen kan worden naar de bibliografie door op Ctrl-Shift-← te drukken (‘Document’, ‘Go Back Doc’).

By clicking on the ‘view’ button the selected article will be displayed. Remember that when the article is displayed in Acrobat Reader you can jump back to the bibliography by pressing Ctrl-Shift-← (‘Document’, ‘Go Back Doc’).

De data in deze MAPS-bibliografie is gecodeerd in XML en rechtstreeks verwerkt met behulp van ConT_EXt en pdfT_EX tot dit PDF-bestand. De 748 items in de bibliografie resulteren in een PDF-bestand van circa 5 megabytes, waarin ruim 800 pagina’s zitten en meer dan 19.000 hyperlinks. Het XML-bestand (mapsbib.xml) en bijbehorende DTD (mapsbib.dtd) staan ook op

deze cdrom. Voor de aardigheid is `mapsbib.xml` eveneens in PDF meegeleverd.

The data in this MAPS bibliography was coded in XML and directly processed into PDF using ConT_EXt and pdfT_EX. The 748 items in the bibliography lead to a PDF file of approximately 5 megabytes which contains over 800 pages and more than 19,000 hyperlinks. The XML file (`mapsbib.xml`) and the associated DTD (`mapsbib.dtd`) can also be found on this cdrom. Just for fun `mapsbib.xml` is also available in PDF.

Deze cdrom is copyright © 2001 Nederlandstalige T_EX Gebruikersgroep.

This cdrom is copyright © 2001 Nederlandstalige T_EX Gebruikersgroep (Dutch Language Oriented T_EX User Group).

De Nederlandstalige T_EX Gebruikersgroep heeft tot doel het in brede zin ondersteunen van de typografische programmeertaal T_EX en het gelijknamige programma. In dat kader worden regelmatig bijeenkomsten en cursussen georganiseerd, diverse mailinglijsten ondersteund en het tijdschrift MAPS uitgegeven. Meer informatie over de NTG is te vinden op de website www.ntg.nl en is per email aan info@ntg.nl te verkrijgen.

The main objective of the Dutch Language Oriented T_EX User Group is to support the typographic programming language T_EX as well as the program with the same name. In this perspective, the NTG organizes meetings and courses, it supports several mailings lists, and publishes the journal MAPS. More information on the NTG can be found at the website www.ntg.nl or can be requested by sending email to info@ntg.nl.
